

HelixCode — Issues Summary

Generated from docs/Issues.md per Constitution §11.4.15 + §11.4.16. Must stay in sync with the source via CM-DOCS-EXPORT-SYNC discipline.

Round 189 prefix convention: IDs are now scope-prefixed (HXC = root project; HXA = HelixAgent; HXL = HelixLLM; HXQ = HelixQA; VEN = VisionEngine; etc.). See docs/Issues.md “Prefix convention” section for the full table + legacy ISSUE-NNN → new mapping.

Last regenerated: 2026-05-21 (round 464 — HXC-010 closed Completed (→ Fixed.md): operator supplied OpenAI-compatible router credentials; both CodeGraph per-agent Challenges cg-challenge-05-kimi.sh + cg-challenge-07-qwen.sh re-run produce true tier-1 PASS — Kimi CLI and Qwen Code each genuinely invoke codegraph_search and receive real graph data from the scanned HelixCode code-graph. Kimi driven via an openai_legacy provider, Qwen via --auth-type openai, both against SiliconFlow; API keys injected via environment variables only, never written to any tracked file (CONST-042 leak-audit CLEAN). All 7 CodeGraph anti-bluff Challenges now true-end-to-end verified across Claude Code, OpenCode, Crush, Kimi CLI, Qwen Code. The open set is now 1 item — HXC-001 (CONST-052 renames — Task, In progress). Previous round 463 — HXC-003 closed Implemented (→ Fixed.md) (CONST-046 i18n migration campaign concluded).
