

DOC_RECONCILIATION_PLAN.2026-06-04

Documentation Reconciliation Plan — Root * .md Sprawl & Rule-9 Over-Claims

Date: 2026-06-04 **Author:** Comprehensive-completion programme, round 468 W6E (conductor main-stream, read-only discovery) **Status:** DISCOVERY + PLAN ONLY — no files deleted/moved by this stream. Execution (mass retirement) is decision-heavy and requires operator sign-off + proper §11.4.90 Obsolete classification. **Method:** read-only filesystem inventory + grep evidence captured this session. Supersedes the stale handoff note “No .mmd/.puml diagram sources” (false — see F5).

1. Findings (evidence-cited)

F1 — Root markdown sprawl: 106 * .md at repo root

ls *.md | wc -l = 106 (vs 18 in docs/). Buckets:

Bucket	~count	Examples	Disposition
Governance (canonical — KEEP)	6	CLAUDE.md, AGENTS.md, CONSTITUTION.md, CRUSH.md, QWEN.md, README.md	Keep; peer-sync per §1.1 of CLAUDE.md
Entry/nav (KEEP, reconcile)	~6	START_HERE.md, CONTINUE_HERE.md, README_DOCKER.md, HELIX_SCRIPT_GUIDE.md, DOCKER_SETUP.md, QUICK_START_TOMORROW.md	Keep; point at docs/CONTINUATION.md as the single resumption record (CONST-044)
Completion/ Success reports (Rule-9 — RETIRE)	~22	see F2	Archive → docs/archive/ + §11.4.90 Obsolete
Phase/session churn (CONSOLIDATE)	~24	PHASE_0_*(5), PHASE_1_*(7), PHASE_2_*(3), PHASE_3_*(3), Phase{2,4,5} _Implementation_Summary, SESSION_*	Fold into CONTINUATION.md history; archive originals
Plans (OVERLAP — consolidate to 1)	~13	*IMPLEMENTATION_PLAN*, *ROADMAP*, MASTER_IMPLEMENTATION_PLAN, COMPREHENSIVE_COMPLETION_PLAN	Consolidate into the 2026-06-04 docs/CONSOLIDATED_* reports already produced
Analysis/Audit (OVERLAP)	~14	COMPREHENSIVE_{ANALYSIS,AUDIT}_REPORT, *GAP_ANALYSIS*, AUDIT_TRACKER_2026, SKIPPED_TESTS_ANALYSIS	Consolidate; keep the newest as reference

Bucket	~count	Examples	Disposition
Trackers (SUPERSEDED by SQLite SSOT — RETIRE)	~6	IMPLEMENTATION_TRACKER, DETAILED_IMPLEMENTATION_TRACKER, COMPLETE_IMPLEMENTATION_TRACKER, AUDIT_IMPLEMENTATION_TRACKER, APPLICATION_CHALLENGE_STATUS	See F3 — replaced by docs/ workable_items.db + docs/Issues.md/ Fixed.md
Reference (cli_agents — KEEP)	~10	EXAMPLE_PROJECTS_*, PLANDEX_*, FEATURE_COMPARISON_MATRIX, HELIXCODE_QUICK_REFERENCE	Keep; legit reference material
Design/spec (KEEP, assess accuracy)	~5	E2E_TEST_SPECIFICATION, TESTING_PLAN, SECURITY_IMPLEMENTATION, PENPOT_INTEGRATION, TEAM_DEVELOPMENT_BREAKDOWN	Keep; verify claims vs reality

F2 — Rule-9 / Article XI §11.9 false-success artifacts (HIGH severity)

```
grep -icE "100% complete|all tests pass|fully working|
production[- ]ready|fully functional|all.*passing|mission
accomplished":
```

File	over-claim phrase hits
FINAL_COMPLETION_SUCCESS_REPORT.md	29
PRODUCTION_DEPLOYMENT_READINESS_REPORT.md	24
IMPLEMENTATION_COMPLETE.md	16
FINAL_COMPLETION_REPORT.md	13
HELIXCODE_COMPLETION_REPORT.md	6
IMPLEMENTATION_SUCCESS.md	2
FINAL_COMPLETION.md, PROJECT_COMPLETION_ANALYSIS.md	1 each

These assert “complete / production-ready / all passing” while docs/CONTINUATION.md (the CONST-044 authoritative record) shows the comprehensive-completion programme still has W6+ open work, and rounds 468b–468d were fixing **broken-build** modules (doc_processor conflict markers, challenges missing-dep, llms_verifier go.sum) and a committed **secret leak**. They are textbook false-success surface (Rule 9 / §11.4.1).

F3 — Tracker docs superseded by the SQLite single-source-of-truth

docs/workable_items.db **exists** (356 KB) — the §11.4.93/§11.4.95 mandated single source of truth — alongside its generated docs/Issues.md (99 KB) + docs/Fixed.md (76 KB). The ~6 root *_TRACKER.md / *_STATUS.md files predate and duplicate this; per §11.4.95 the DB is authoritative. They are retire candidates (risk: drift — a human reads a stale tracker that contradicts the DB).

F4 — Missing docs/ARCHITECTURE.md (gap)

ls docs/ARCHITECTURE.md ARCHITECTURE.md → **No such file**. Yet CLAUDE.md §11 cites docs/ARCHITECTURE.md as the architecture-question authority and §3.4-area docs reference it. HELIXCODE_ARCHITECTURE_CONSISTENCY_REPORT.md exists but is a *report*, not the architecture doc. **Action: author** docs/ARCHITECTURE.md (the meta-repo + inner helix_code/ module + submodule topology, sourced from §3.2 of CLAUDE.md and verified against the live tree).

F5 — Diagram sources DO exist (corrects stale handoff)

find ... -name '*.mmd' -o -name '*.puml' -o -name '*.drawio' = **128** (excluding cli_agents/resources/deps). Distribution: helix_agent 40, helix_llm 14, llms_verifier 6, helix_qa 6, plus 3–4 each across ~30 functional submodules. The handoff's "No .mmd/.puml diagram sources" is **false**. Real gap is narrower: **root + inner helix_code/ architecture diagrams** appear thin — to be quantified when docs/ARCHITECTURE.md is authored.

F6 — Aspirational/stub docs that over-claim by title

- SONARQUBE_SNYK_IMPLEMENTATION.md — aspirational only (no working containerized Snyk/Sonar yet; that's a queued LARGE phase). Title implies implemented.
- VIDEO_COURSE_CURRICULUM.md — stub; real course material lives in github_pages_website/docs/courses. Both should be relabeled ..._PLAN.md / carry a Status: PLANNED header (§11.4.73 spec-versioning posture) until backed by reality.

2. Prioritized reconciliation plan

Each retirement = move to docs/archive/<name> (preserve history, §9 no-loss) + a one-line docs/archive/INDEX.md pointer + §11.4.90 Obsolete (→ Fixed.md) ledger entry with Reason: superseded-by-later-mandate (SSOT/CONTINUATION) or stale-documentation. **No rm**.

- **P1 (HIGH, anti-bluff) — Neutralize F2 false-success reports.** Archive the ~22 completion/success reports; add a one-line banner redirect to docs/CONTINUATION.md. Removes the worst Rule-9 surface. *Decision-gated (operator)*.
- **P2 (HIGH) — Author docs/ARCHITECTURE.md (F4).** Fills a cited-but-missing authority doc. Net-new content, low risk — can proceed without retirement sign-off. *Good candidate for a dedicated subagent stream.*
- **P3 (MED) — Retire F3 tracker docs** in favor of workable_items.db/Issues.md/Fixed.md. *Decision-gated.*
- **P4 (MED) — Consolidate F1 plan/analysis/phase churn** into the existing docs/CONSOLIDATED_* + CONTINUATION.md; archive originals. *Decision-gated.*
- **P5 (LOW) — Relabel F6 aspirational docs** with Status: PLANNED. Low risk.

3. Decision points for operator

1. **Approve mass archive** of P1/P3/P4 (~50 root docs → docs/archive/)? Default safe action = archive-not-delete (reversible per §9.2), so this is low-blast-radius and a candidate for autonomous proceed under §11.4.101 — but volume warrants explicit sign-off.

2. Confirm docs/CONTINUATION.md + docs/workable_items.db as the **two** canonical live records, with everything else either reference or archived.

4. Honest boundary (§11.4.6)

This is a read-only inventory + plan. It does **not** verify the *content accuracy* of the KEEP-bucket design/spec docs (F1 row 9) — that is per-doc follow-up work. Submodule-internal doc sprawl (helix_code 84, llms_verifier 159 per handoff) is **not** re-counted here and remains a separate per-module sweep.
