

HXC-108_tui_views_evidence

HXC-108 — TUI per-view recording evidence (§11.4.158)

Date: 2026-06-23 · **Client:** terminal-UI (tview/tcell) · **Mode:** fully automatic, no TCC/Aqua/human

Harness

scripts/video_qa/record_tui_views.sh — launches the TUI binary in a detached tmux session (fixed 200×50), drives view navigation via tmux send-keys (programmatic key injection — no human, no TCC), captures each view, assembles project-prefixed MP4s (§11.4.155) under /Volumes/T7/Downloads/Recordings/ (gitignored raw corpus, §11.4.128), and reaps the tmux session (§11.4.14).

Views recorded + OCR-validated (real content)

View	Recording	OCR-confirmed real content
Dashboard	helixcode-tui-dashboards-20260622T213246Z.mp4	(prior run) HelixCode v1.0.0, sidebar, Workers/Tasks counters, Status bar
Tasks	helixcode-tui-tasks-20260623T133410Z.mp4	Task Management — Tasks: (1) Code Generation Task "Generate REST API endpoints" (2) Testing Task "Run unit tests" (3) ... — real seeded task list
Workers	helixcode-tui-workers-20260623T133444Z.mp4	Worker Management — ID Hostname Status Health CPU% Memory% Tasks Last Heartbeat ... No workers registered — real worker table
Projects	helixcode-tui-projects-20260623T133516Z.mp4	Project Management — Name Type Path Status Created Updated ... No projects found. Click 'New Project' — real projects view
Sessions	helixcode-tui-sessions-20260623T133553Z.mp4	Session Management — Development Sessions: Name Project Mode Status Duration

View	Recording	OCR-confirmed real content
		Created ... No sessions found — real sessions view
QA	helixcode-tui-qa-20260623T133656Z.mp4	QA Dashboard — QA Engine: DISABLED ... ID Status Phase Progress Platforms Banks Duration — real QA view (DISABLED is the genuine state, no live QA session)

All six TUI views (the sidebar nav (d) Dashboard ... (q) QA ... (c) Settings plus each view’s management panel) rendered genuine application output — not simulated/placeholder. The empty-state rows (“No workers registered”, “No projects found”) are the real rendered states of a freshly-launched TUI.

Validation method (honest §11.4.6 note)

The harness reached its 82nd tool-step and produced all 5 per-view recordings, but a transient API throttle killed the agent **before** it ran the harness’s own self-validated OCR analyzer + wrote this doc. The conductor therefore finished the validation directly: extracted a frame from each of the 5 MP4s (ffmpeg) and OCR-read it (tesseract), confirming the real per-view content above. The harness’s self-validated analyzer (`scripts/video_qa/record_feature.sh selftest`: golden-good PASS / golden-bad FAIL — provably cannot bluff) remains available for a future re-run; this evidence is the conductor’s direct OCR-confirmation of real rendered content, which the recordings (committed-by- reference, gitignored) back.

Durable evidence (committed) — rotation-proof anchors (§11.4.83, HXC-108 audit F2 fix)

The raw corpus (`/Volumes/T7/Downloads/Recordings/`, §11.4.128/154-rotatable) is the secondary location. All per-view recordings + evidence frames are **copied into the committed tree** so a rotation cannot dangle these citations. All MP4s ffprobe-verified valid H.264 after copy (the 5 driven views are 1604×868/50f; dashboard is the prior run):

View	Committed MP4 sha256
dashboard (prior)	(frame only)
tasks	d0e01c4e5211e5929256a230f0528b5ea533f2860b2728a745ec13bee9cbb6af
workers	383400681bf61ff24ba5e135b62779f9f8bf10af4705860c791c9ed1498b9fd0
projects	413b4f0a9e2942de8b039614af5f8b51a8a09899019107358037c0dfc0f7a7d4
sessions	b35f96009c098bf468f37c58c6c4313cdd4ca3fc1aca6fa224322dd8cf947108
qa	90d60d8ee561e51efda94fa5ddc024598a31da9cabf82a4db4ad9a6a92df840e

Committed under `docs/qa/HXC-108_tui_views/` (filenames preserve the `<run-id>` timestamps cited above).

Status

TUI per-view coverage: **6/6 views recorded with real-content OCR confirmation.** Fully automatic (tmux send-keys), no TCC/Aqua/human.
