Retro-capture: CLI streaming LLM generation (-stream)

Retro-captured 2026-06-16 vs HEAD 9e6e0458
(9e6e0458f93b7e50ee6d47d8324b34f02e77b31c). Fresh CURRENT run on the running System — explicitly a retro-capture on 2026-06-16, NOT original/historical evidence (§11.4.6 / §11.4.123). Backfills the §11.4.83 docs/qa gap (G7) for the streaming-generation surface.

What was exercised (real end-user CLI path)

Provider: DeepSeek.

File	Feature	Real result
cli_stream_generate.txt	cli -non-interactive -provider deepseek -stream -prompt "Count from 1 to 5..."	Real streamed model output 1\n2\n3\n4\n5 +  Generation completed.

Anti-bluff notes

- Real streamed provider response over the -stream path; output is the model's, not a placeholder (§11.4 / §11.4.2).
