Core Features

1. Sandboxed Execution

- Uses macOS Seatbelt (`/usr/bin/sandbox-exec`) for sandboxing
- Network-disabled by default in sandbox
- Secure command execution environment

2. Multi-Modal Input

- Natural language commands
- File attachments
- Image context support

3. Approval System

- Configurable approval policies
- Command execution approval
- Patch application approval

4. Git Integration

- Automatic git commits
- Branch management

- Diff viewing

5. Collaboration Modes

- Full autonomy mode
- Interactive mode
- Approval-required mode

6. TUI (Terminal UI)

- Built with ratatui (Rust)
- Rich interactive interface
- Chat-style interaction
- File browser integration

7. Protocol-Based Communication

- JSON-RPC Lite protocol
- Structured request/response
- Thread history management
- Conversation summaries
