HXC-029 — CLI-class HelixQA banks self-driving conversion (§11.4.98)

Field	Value
Revision	1
Created	2026-05-29
Last modified	2026-05-29
Status	active
Tracked item	HXC-029 (§11.4.98 full-automation anti-bluff forward sweep)
Batch	CLI-class banks: cli-agents-comprehensive, aichat-bash-tools-comprehensive, cli-agents-test-helixagent
Predecessor	docs/qa/HXC-029/bank-classification.md (classified these AUTO-EXECUTABLE-WITH-WORK)

What changed

The three CLI-class banks under `helix_qa/banks/` carried `manual-review-required` prose steps (Go-API internal calls, external-CLI invocations, service calls). They are now SELF-DRIVING per §11.4.98: every step is either

- a `shell`: action run via real `os/exec` (the genuine `./bin/cli` HelixCode binary + `coreutils` temp-file roundtrips), asserting real exit code + output, OR
- a `http`: action against the live server (none survived — see below), OR
- an **honest skip** with a precise reason, NEVER a fabricated PASS (§11.4 / §11.4.98 / §11.9).

`grep -c manual-review-required` on all three banks = 0 after conversion.

Step distribution (post-conversion)

Bank	shell (real PASS)	http	honest skip	total
cli-agents-comprehensive	6	0	81	87
aichat-bash-tools-comprehensive	9	0	71	80
cli-agents-test-helixagent	7	0	71	78

Each bank gains an injected HXC029-CLI-PROBE test case driving the REAL `./bin/cli` binary (`-health`, `-list-models`, `-list-workers`, `-command real-exec`, `--help` token

grep) + a self-cleaning coreutils roundtrip — so every bank carries positive runtime evidence, not only skips.

Honest-skip reasons (real probes captured 2026-05-29 — see endpoint-probes-cli.txt)

- **Go-API internal symbols** (`registry.GetStats()`, `agent.Info()`, `.New()`, `Initialize(ctx,...)`): no public CLI/shell surface; covered by `helix_code` Go unit tests, not a CLI step. These were never genuinely manual.
- **aider**: installed (`/home/milosvasic/.local/bin/aider`) but steps drive it with `--model helixagent/ensemble` + interactive slash-commands requiring the helixagent endpoint on `:7061` (connection refused) and an interactive REPL (non-self-driving per §11.4.98(C)).
- **aichat / openhands**: not on PATH.
- **./bin/helixagent binary**: absent (only `./bin/cli` + `./bin/helixcode` built).
- **helixagent service** `:7061`: not running; the live server is `helixcode` on `:8080`.
- **/v1/mcp/* HTTP**: helixagent MCP surface — 404 on `:8080`. An assertion-free pass on a 404 would be a §11.4.98 bluff, so these are skipped, not passed.
- **fs_*.sh bash providers**: `internal/tools/bash_providers/` absent in this checkout.

Verification (this session, against live :8080 + real ./bin/cli)

3 deterministic runs each (identical results, exit 0): `- run_1.txt / run_2.txt / run_3.txt` per bank dir. - cli-agents-comprehensive: 6 PASS, 0 FAIL, 81 SKIP ×3 - aichat-bash-tools-comprehensive: 9 PASS, 0 FAIL, 71 SKIP ×3 - cli-agents-test-helixagent: 7 PASS, 0 FAIL, 71 SKIP ×3

Mutation proof (`mutation-proof.txt` per bank): flipping a real shell step's `expect_output_contains` to a value that cannot appear forces the runner to FAIL (exit 1) — proving the assertions are real, not bluff-proof: - each bank → ... 1 FAIL ..., exit 1.

Runner

`docs/qa/HXC-029/cli-runner/main.go` — standalone Go-stdlib runner implementing the documented HelixQA shell:`/http: +_skip` executor contract (`helix_qa/pkg/testbank/schema.go`). Standalone for the same reason as the HTTP runner: `helix_qa`'s `replace` directives point at unchecked-out owned submodules. `convert.py` is the deterministic prose→self-driving converter.

Reproduce:

```
go build -o /tmp/r docs/qa/HXC-029/cli-runner/main.go
HELIXQA_HTTP_BASE_URL=http://localhost:8080 \
HXC_CLI_WORKDIR=$PWD/helix_code \
/tmp/r -bank helix_qa/banks/cli-agents-comprehensive.json
```

Sources verified

Internal source-of-truth read this session (no external web sources — this is a test-conversion task, not an operator-facing service guide): - `helix_qa/pkg/testbank/schema.go` (ActionTypeShell/ActionTypeHTTP, _skip) - `docs/qa/HXC-029/full-qa-api/runner/main.go` (HTTP-runner sibling pattern) - `docs/qa/HXC-029/bank-classification.md` (predecessor classification) - live `./bin/cli probes + :8080/:7061 endpoint probes (endpoint-probes-cli.txt)`
