HXC-029 §11.4.98 — Playwright (browser) + Android Banks Ledger

Field	Value
Revision	1
Created	2026-05-29
Last modified	2026-05-29
Status	active
Tracked item	HXC-029 (§11.4.98 full-automation anti-bluff forward sweep)
Batch	Playwright (browser) + Android banks in helix_qa/banks/
Pass type	SCOPE classification + live web-UI surface probe + read-only adb device probe. NO real device driven. NO bank source modified.
Drivers present	chromium + ~/.local/bin/playwright + cached chromium-1217; adb 37.0.0 + 2 connected devices

Headline result

ZERO of the Playwright/Android banks in this batch are HelixCode-scope. Every browser bank and every Android bank targets a DIFFERENT project (Catalogizer, Yole) or HelixQA’s OWN internal automation engine (pkg/nexus, pkg/capture) — not the HelixCode platform. HelixCode itself is **API-only** (no web UI, no Android app), proven by live route probing. Therefore there is **no in-scope HelixCode Playwright surface to convert** and **no in-scope HelixCode Android app to drive**. Honest classification per §11.4.6 (no-guessing) and §11.4.90 — NOT a fabricated PASS.

Evidence: HelixCode serves NO web UI (Playwright has no in-scope target)

docs/qa/HXC-029/playwright-android/helixcode-webui-probe.txt (live, server up):

```
GET / -> HTTP 404 text/plain
GET /api/v1/health -> HTTP 200 application/json
GET /health -> HTTP 200 application/json
GET /dashboard -> HTTP 404 text/plain
GET /ui -> HTTP 404 text/plain
```

```

GET /login          -> HTTP 404  text/plain
GET /index.html     -> HTTP 404  text/plain
GET /static/        -> HTTP 404  (empty)
GET /web            -> HTTP 404  text/plain
GET /metrics        -> HTTP 404  text/plain

```

Only the two JSON health endpoints answer 200. There is no HTML/dashboard/login surface. Playwright (chromium driver present + cached) has nothing HelixCode-side to drive — running the browser banks would exercise Catalogizer’s React frontend (localhost:3000) or HelixQA’s own Go engine, both out of HXC-029 scope.

Evidence: read-only adb device probe (Android — classification only)

docs/qa/HXC-029/playwright-android/android-driver-probe.txt:

```

adb version 1.0.41 / 37.0.0  (driver present)
2 devices: 66ff9c4f51f00ee7 + 998fd36615e99484  -> model:ATMOSphere produc

```

The 2 physical devices are **ATMOSphere** (shiba) hardware — the Arvus/ATMOSphere project, NOT HelixCode. No `install / am start / settings put / input` was issued (only adb devices). Per the batch safety rule, real devices are NOT auto-driven; in-scope Android work (there is none here) would be `operator_attended`.

Per-bank ledger

Scope grep evidence: docs/qa/HXC-029/playwright-android/bank-scope-evidence.txt.

bank	scope	driver	classification	evidence
full-qa-web.json/.yaml	other-project (Catalogizer)	playwright	out-of-scope (targets Catalogizer React @ localhost:3000)	bank (meta 22x)
fixes-validation-browser.yaml	other (HelixQA own engine)	go-build/test	out-of-scope (tests HelixQA’s pkg/nexus/browser engine, target catalogizer.local)	bank (6x p)
nexus-browser.json/.yaml	other (HelixQA own engine)	go-build/test	out-of-scope (feature: helix-nexus-browser; go build ./pkg/nexus/...)	bank (hel)
full-qa-android.json/.yaml	other-project (Catalogizer)	adb/uiauto	out-of-scope (Catalogizer Android phone app)	bank (meta)
full-qa-androidtv.json/.yaml	other-project (Catalogizer)	adb/DPAD	out-of-scope (com.catalogizer.androidtv on Xiaomi Mi Box; localhost:8080 is the user-typed <i>Catalogizer backend</i> URL field)	bank (55x com)
full-qa-androidtv-challenges.json	other-project (Catalogizer)	adb/DPAD	out-of-scope (Catalogizer Android TV challenge mirror)	bank (Cata)

bank	scope	driver	classification	evidence
validation-androidtv-focus.json	other-project (Catalogizer)	adb/DPAD	out-of-scope (Catalogizer AndroidTV channels/deep-links)	bank (meta)
file-browser.yaml	other-project (Yole)	adb/uiauto + browser	out-of-scope (Yole file browser GUI)	bank (meta)
app-navigation.yaml	other-project (Yole)	adb/uiauto	out-of-scope (Yole navigation)	bank (meta)
editor-operations.yaml	other-project (Yole)	adb/uiauto	out-of-scope (Yole editor GUI)	bank (meta)
all-formats.yaml	other-project (Yole)	adb/uiauto	out-of-scope (Yole editor formats)	bank (meta)
cloud-storage-operations.yaml	other-project (Yole)	adb/uiauto	out-of-scope (Yole cloud storage GUI)	bank (meta)
storage-configuration.yaml	other-project (Yole)	adb/uiauto	out-of-scope (Yole storage config GUI)	bank (meta)
edge-cases-stress.yaml	other-project (Yole)	adb/uiauto	out-of-scope (Yole GUI stress)	bank (24x)
nexus-mobile-android.yaml	other (HelixQA own engine)	go/appium	out-of-scope (feature: helix-nexus-mobile-android; Appium engine)	bank (helix)
fixes-validation-mobile.yaml	other (HelixQA own engine)	go/appium	out-of-scope (HelixQA pkg/nexus mobile regressions)	bank (4x p)
image-quality-gate.yaml	other-project (Catalogizer)	adb/screencap	out-of-scope (Catalogizer AndroidTV image-quality)	bank (meta andro)
full-qa-cross-platform.yaml	other-project (Catalogizer)	playwright/adb	out-of-scope (Catalogizer cross-platform login flow)	bank (meta)
capture-android.yaml	other (HelixQA own device-capture)	adb/scrcpy	out-of-scope (HelixQA pkg/capture/android device capture — Arvus/ATMOSphere surface)	bank (11x)
capture-linux.yaml	other (HelixQA own device-capture)	x11/portal	out-of-scope (HelixQA pkg/capture/linux desktop capture)	bank (11x)

Counts

Metric	Count
Banks examined (browser + android + capture)	20
HelixCode-scope	0
	20

Metric	Count
Other-project / other-component (out of HXC-029 scope)	
Playwright verified-3x (HelixCode)	0 (no HelixCode web UI exists)
Android operator-attended (HelixCode)	0 (no HelixCode Android app exists)
Obsolete	0 (banks are valid — for THEIR own projects)
Out-of-scope	20

Out-of-scope breakdown: Catalogizer = 8 (full-qa-web, full-qa-android, full-qa-androidtv, full-qa-androidtv-challenges, validation-androidtv-focus, image-quality-gate, full-qa-cross-platform); Yole = 7 (file-browser, app-navigation, editor-operations, all-formats, cloud-storage-operations, storage-configuration, edge-cases-stress); HelixQA own engine/capture = 5 (fixes-validation-browser, nexus-browser, nexus-mobile-android, fixes-validation-mobile, capture-android, capture-linux — note nexus-browser + nexus-mobile share the engine).

Anti-bluff posture

Per §11.4.6 (no-guessing) and §11.4.51/§11.4.79 (HelixQA banks stay decoupled, project-not-aware): these banks are NOT broken and NOT obsolete — they correctly validate Catalogizer / Yole / HelixQA's own engine. Converting them to target HelixCode would be incorrect (it would couple a reusable QA bank to a specific consuming project) AND out of HXC-029 scope. The honest classification is **out-of-scope for HXC-029**, with the underlying reason captured live: HelixCode has no browser UI and no Android app for these driver classes to target.

What genuinely remains for HXC-029

Nothing automatable in THIS batch. The HelixCode-relevant automatable surface (API + CLI banks) was handled by the prior 7/18 verified banks. The `manual-review-required` prose steps catalogued in `bank-classification.md` (server-API + CLI sub-groups) are the remaining HelixCode-scope conversion work and belong to the API/CLI batches, not this one. This Playwright/Android batch **concludes with no further automatable HelixCode work** — driving the real ATMOSphere devices or other-project apps is explicitly out of scope and would be operator-attended for those projects.

Sources verified 2026-05-29

- Live HelixCode server route probe (`localhost:8080`) — captured in `helixcode-webui-probe.txt`
- `helix_qa/banks/*.yaml, json` metadata + target greps — captured in `bank-scope-evidence.txt`
- `adb devices -l` (read-only) — captured in `android-driver-probe.txt`
