HXC-030 — §11.4.99 Documentation Staleness Inventory (Scoping Pass)

Item: HXC-030 — §11.4.99 latest-source documentation cross-reference forward sweep **Date:** 2026-05-29 **Author** **method:** Read-only inventory. Enumerated every operator-facing doc under docs/, README.md, and helix_code/README.md; for each, extracted referenced external services/libraries via pattern scan (grep -oIE over version/service tokens), checked for an existing ## Sources verified footer (grep -rL "Sources verified"), captured git last-commit dates for the high-risk setup docs, and flagged stale version signals (notably Go 1.24, which contradicts CLAUDE.md §3.1’s mandated Go 1.26 inner / Go 1.25.2 root).

SCOPE NOTE — THIS IS A SCOPING INVENTORY, NOT THE FULL §11.4.99 VERIFICATION. No external official documentation was fetched in this pass. NO doc below is claimed verified. The actual §11.4.99 pass (separate deliverable) MUST WebFetch the latest official online docs for each referenced service/library, cross-reference every instruction step, document negative findings, and add the ## Sources verified <date>: <urls> footer + commit-message footer. This document only scopes WHAT needs verifying and in WHAT ORDER.

Exclusions (per task scope): tracker/governance docs (Issues.md, Fixed.md, CONTINUATION.md, *_Summary.md), pure-internal audit/research/evidence trees (docs/audits/, docs/qa_evidence/, docs/research/, docs/improvements/, docs/superpowers/, docs/coverage/, docs/adr/, docs/codegraph/, docs/architecture/, docs/exports/), and the large internal integration-plan blobs (docs/llms_verifier/**, docs/helix_qa/**, docs/bluff_proofing/full_plan/**) which are internal planning material rather than operator-facing instructions.

Risk-classified service categories (per §11.4.99(D), 90-day max staleness)

AI/LLM providers (OpenAI, Anthropic, Gemini, DeepSeek, Groq, Mistral, xAI, OpenRouter, Ollama, Llama.cpp), cloud APIs (AWS Bedrock, Azure), code-hosting (GitHub/GitLab), package managers / language toolchains (Go), and container runtimes (podman/docker) all fall in or adjacent to risk-classified categories. PostgreSQL/Redis are infrastructure (standard 6-month staleness).

Inventory table

Doc (path)	Referenced services/libs	“Sources verified” footer?	Risk-classified?	
README.md	Go 1.24/1.25/1.26, Ollama, pgx,	Y (2026-05-29, go.dev	Yes (Go, LLM, DB)	

Doc (path)	Referenced services/libs	“Sources verified” footer?	Risk-classified?	
	PostgreSQL 15/17, Redis 7	release page + repo cross-ref)		
helix_code/README.md	docker, podman, Kubernetes, Ollama	N	Yes (containers, LLM)	
docs/COMPLETE_DEPLOYMENT_GUIDE.md	Azure, docker, Kubernetes	N	Yes (cloud, containers)	
docs/DEPLOYMENT_GUIDE.md	Azure, docker, Kubernetes, postgresql-15	N	Yes (cloud, containers, DB)	
docs/COMPLETE_CONFIGURATION_DOCUMENTATION.md	Azure, Ollama	N	Yes (cloud, LLM)	
docs/COMPLETE_SECURITY_GUIDE.md	Azure, docker, Kubernetes	N	Yes (cloud, containers)	
docs/COMPLETE_API_REFERENCE.md	docker, Kubernetes	N	Yes (containers)	
docs/COMPLETE_CLI_REFERENCE.md	docker	N	Yes (containers)	
docs/COMPLETE_EXAMPLES_TUTORIALS.md	docker, Kubernetes	N	Yes (containers)	
docs/COMPLETE_PERFORMANCE_TUNING_GUIDE.md	docker, Kubernetes	N	Yes (containers)	
docs/COMPLETE_TROUBLESHOOTING_GUIDE.md	docker	N	Yes (containers)	
docs/troubleshooting/guide.md	Anthropic, docker, Gemini, gin, Go 1.24 , llama, mistral, Ollama, OpenAI	N	Yes (LLM, containers, Go)	

Doc (path)	Referenced services/libs	“Sources verified” footer?	Risk-classified?	
docs/general/DEVELOPER_GUIDE.md	Anthropic, docker, Gemini, Ollama, OpenAI, Podman	N	Yes (LLM, containers)	1
docs/general/PROVIDER_FEATURES.md	OpenAI, Anthropic, Azure, Bedrock, DeepSeek, Gemini, Groq, llama, Ollama	N	Yes (LLM, cloud)	1
docs/general/MENTIONS_USER_GUIDE.md	(none detected)	N	No	1
docs/general/ SLASH_COMMANDS_USER_GUIDE.md	(contains a stale Go 1.24 ref)	N	Borderline (Go)	1
docs/general/PROVIDER_UPDATE_SUMMARY.md	(not deep-scanned)	N	Yes (LLM)	1
docs/general/ FEATURE_IMPLEMENTATION_COMPLETE.md	(not deep-scanned)	N	No	1
docs/user_manual/README.md	all 7 LLM providers, Azure, Bedrock, docker, Kubernetes, postgresql-14, Go 1.24	N	Yes (LLM, cloud, containers, DB, Go)	1
docs/user_manual/INDEX.md	all 7 LLM providers, Azure, Bedrock, docker, Kubernetes	N	Yes (LLM, cloud, containers)	1
docs/user_manual/ ZERO_BLUFF_USER_MANUAL.md	all 7 LLM providers, Azure, Bedrock, Go 1.26, PostgreSQL 15, Redis 7	N	Yes (LLM, cloud, DB, Go)	1

Doc (path)	Referenced services/libs	“Sources verified” footer?	Risk-classified?	
docs/user_manual/SUMMARY.md	(not deep-scanned)	N	Borderline	1
docs/api_reference/README.md	all 7 LLM providers, Bedrock, gin, Go 1.25 + go 1.26	N	Yes (LLM, cloud, Go)	1
docs/deployment_guide/README.md	Anthropic, docker, gin, LLama, Ollama, podman	N	Yes (LLM, containers)	1
docs/developer_guide/README.md	Docker, gin, Ollama	N	Yes (LLM, containers)	1
docs/materials/LLMs_Optimization.md	Anthropic, DeepSeek, gin, groq, llama, Ollama, OpenAI	N	Yes (LLM)	1
docs/materials/Encryption_Algs.md	(none detected)	N	No	1
docs/platforms/README.md	(none detected)	N	No	1
docs/LLMsVerifier_User_Guide.md	Ollama	N	Yes (LLM)	1
docs/HOST_POWER_MANAGEMENT.md	(none detected)	N	No	1
docs/bluff_proofing/README.md	(not deep-scanned)	N	No	1
docs/bluff_proofing/STEP_BY_STEP_GUIDE.md	Anthropic, docker, Go 1.24 , llama, Ollama, OpenAI, PostgreSQL 15, Redis 7	N	Yes (LLM, containers, DB, Go)	1
docs/bluff_proofing/MASTER_ACTION_PLAN.md	(contains stale Go 1.24)	N	Borderline	1
docs/troubleshooting/guide.md	(listed above)	—	—	-

Doc (path)	Referenced services/libs	“Sources verified” footer?	Risk-classified?

Counts

- **Total operator-facing docs inventoried:** 30 (excluding the duplicate troubleshooting row).
- **Already carrying a ## Sources verified footer: 1** — README.md only. (Other Sources verified matches found by grep — docs/Issues.md, docs/Issues_Summary.md, and their HTML exports — are governance/tracker docs and are OUT OF SCOPE.)
- **Risk-classified (touch LLM/cloud/code-hosting/package-manager/container categories): 22** of 30.
- **Stale-version signal (Go 1.24, contradicting CLAUDE.md §3.1 Go 1.26/1.25.2):** present in operator docs docs/DEPLOYMENT_GUIDE.md, docs/troubleshooting/guide.md, docs/general/DEVELOPER_GUIDE.md, docs/general/SLASH_COMMANDS_USER_GUIDE.md, docs/user_manual/README.md, docs/user_manual/tutorials/Tutorial_1_Building_Web_App.md, docs/user_manual/tutorials/Tutorial_9_Custom_Provider.md, docs/user_manual/tutorials/Tutorial_10_Adding_a_Tool.md, docs/bluff_proofing/STEP_BY_STEP_GUIDE.md, docs/bluff_proofing/MASTER_ACTION_PLAN.md.
- **Date-stale signal (git last-commit > 5 months, near the 6-month staleness floor):** docs/COMPLETE_DEPLOYMENT_GUIDE.md and docs/DEPLOYMENT_GUIDE.md (both 2025-12-11).

Prioritized verification worklist (verify these first)

Priority rule (§11.4.99(D)): risk-classified + version-bearing setup/deploy docs first; docs with both a stale signal AND a missing footer rank highest.

1. docs/DEPLOYMENT_GUIDE.md — deploy doc, Azure + docker + Kubernetes + postgresql-15, stale Go 1.24, git-stale (2025-12-11), no footer. Highest blast radius (operators run it).
2. docs/COMPLETE_DEPLOYMENT_GUIDE.md — companion deploy doc, Azure + containers, git-stale (2025-12-11), no footer.
3. docs/user_manual/README.md — flagship 3240-line user manual; all 7 LLM providers + Azure + Bedrock + containers + postgresql-14 + stale Go 1.24; broadest external surface.
4. docs/general/PROVIDER_FEATURES.md — per-provider feature/capability claims across all LLM providers + Bedrock + Azure; intersects CONST-036/037/039 (verifier-sourced metadata).
5. docs/troubleshooting/guide.md — 1422-line troubleshooting doc; broad LLM-provider + docker + stale Go 1.24; operators consult under failure conditions where bad advice is costly.

Next tier (verify after top 5): `helix_code/README.md`, `docs/deployment_guide/README.md`, `docs/COMPLETE_CONFIGURATION_DOCUMENTATION.md`, `docs/user_manual/ZERO_BLUFF_USER_MANUAL.md`, then the remaining `COMPLETE_*`, `user_manual`, and materials docs.

What the actual §11.4.99 verification pass still requires (live work, NOT done here)

For each doc above (starting with the top-5 worklist) the verification pass MUST: 1. WebFetch the LATEST official online docs for each referenced service/library (go.dev release page; PostgreSQL/Redis release notes; Ollama docs; podman/Docker docs; AWS Bedrock + Azure docs; each LLM provider's official API docs; gin/pgx upstreams). 2. Cross-reference every instruction step against that source; correct the stale Go 1.24 references to the mandated Go 1.26 (inner) / 1.25.2 (root) and reconcile `postgresql-14` vs `postgresql-15/17`. 3. Document negative findings (gaps/silences/contradictions) explicitly. 4. Add a `## Sources verified <date>: <urls>` footer to each doc + a matching `Sources verified <date>: <urls>` commit-message footer.

Sources verified

N/A — this is a read-only scoping inventory, not an operator-facing instruction doc. No external sources were fetched; no instruction in this file directs an operator to act on a third-party service. The §11.4.99 footer obligation applies to the docs listed above when they are verified, not to this inventory.
