HXC-041 — helixqa standalone HTTP bank-runner (helixqa http) + live proof

New subcommand `helixqa http -bank <yaml> -base-url <url>` (`helix_qa cmd/helixqa/http.go` +281, `http_test.go` +285). Drives a bank's http: cases through `pkg/autonomous HTTPExecutor` — NO Playwright, NO LLM. - `go build` exit 0 (`bin/helixqa` 29.7M); `go test ./pkg/autonomous/... ./cmd/helixqa/...` → ok (8/8, incl. 2 §1.1 mutation tests that correctly FAIL). - LIVE vs booted `helix_code/bin/helixcode` (port 18081, `db=nil graceful`): `helixcode-auth.yaml` → 16 cases: 15 PASS, 1 FAIL, exit 1 (the 1 FAIL = real bug HXC-043). `helix_qa` commit `d6c084d6` (3 files, no `git add -A`).
