HXC-055 — formatters cat -version + go_hello fixtures (§11.4.81)

Captured: 2026-06-09T14:54:03Z · Bug · Fixed (→ Fixed.md) **Submodule:** submodules/formatters ## (a) RED: cat -version on Darwin → cat: illegal option, exit 1; TestNativeFormatter_HealthCheck_Success FAILED. ## (b) RED: challenges/fixtures/go_hello_{en,sr}.go are package main w/o func main → go build ./... FAILED tree-wide. ## Fix (a) HealthCheck probe <bin> -version → exec.LookPath(binaryPath) (portable GNU/BSD/macOS/Windows; BinaryMissing negative contract preserved). (b) git mv both fixtures into challenges/fixtures/testdata/ (Go excludes testdata/ from build); runner embeds content as inline strings so files preserved (§11.4.124 relocate-not-delete). ## GREEN: go build ./... exit 0 (FMT_BUILD_OK); go vet 0; go test ./... all ok; HealthCheck Success/Missing/WithTrue PASS; runner builds+runs. Commit d205be3, pushed ff3d4f469..d205be3 (both remotes confirmed).
