Retroactive QA evidence — commit 83b2690a (run-id real-dial)

RECONSTRUCTED, AFTER-THE-FACT DOCUMENTATION (HXC-039, §11.4.83). This file is NOT a captured-at-the-time end-user transcript. It is honest retroactive documentation created during the HXC-039 §11.4.83 back-fill, operator-authorized, to give a pre-existing feature commit its required docs/qa/<run-id>/evidence directory WITHOUT rewriting git history. No runtime output below is fabricated (§11.4.6 / §11.4.123).

Field	Value
Commit SHA	83b2690a3d24cd732c3f2c2882aac6fda1dfe806
Short SHA	83b2690a
Authored	2026-06-09T13:02:42+05:00
Subject	fix(config,deployment): expand \${VAR:default} in config; real-dial deployment health
run-id basename	real-dial (a verbatim substring of the commit subject)

What the commit changed (from git show --stat)

```
helix_code/internal/config/config.go | 45 +++++++
helix_code/internal/config/redis_host_expansion_test.go | 118 ++++++++
helix_code/internal/deployment/production_deployer.go | 21 +++-
3 files changed, 183 insertions(+), 1 deletion(-)
```

Two changes: (1) internal/config/config.go gained \${VAR:default} environment-variable expansion support, and (2) internal/deployment/production_deployer.go switched its deployment health check to a real network dial.

Verification that exists for this commit

- **Paired unit test:** internal/config/redis_host_expansion_test.go (118 new lines) was added in the SAME commit, covering the \${VAR:default} config-expansion fix (go test ./internal/config/...).
- The deployment real-dial change is structural (replaces a non-dialing health path with a real dial); the contemporaneous coverage is the config expansion test above.
- **No captured runtime transcript was recorded at commit time** for this feature under docs/qa/. This directory is retroactive documentation.

Honesty statement

Reconstructed documentation. NO faked PASS logs, NO fabricated runtime output. Asserted verification = the in-commit config unit-test delta visible in `git show 83b2690a`.
