Retroactive QA evidence — commit 3ce30285 (run-id round468b)

RECONSTRUCTED, AFTER-THE-FACT DOCUMENTATION (HXC-039, §11.4.83). This file is NOT a captured-at-the-time end-user transcript. It is honest retroactive documentation created during the HXC-039 §11.4.83 back-fill, operator-authorized, to give a pre-existing commit its required docs/qa/<run-id>/evidence directory WITHOUT rewriting git history. No runtime output below is fabricated (§11.4.6 / §11.4.123).

```

A chore(meta) “Wave3” commit: broken-build fixes + “W4C” config work in internal/config/config.go, docs, and 6 submodule pointer bumps. The production-code touch tripping the feature heuristic is the config.go change.

Verification that exists for this commit

- **Paired unit test extended in the SAME commit:** internal/config/fresh_install_save_test.go (64 new lines) covers the config changes (go test ./internal/config/...).

- This is a `chore(meta)` commit (build fixes + config + pointer bumps), not a user-facing feature; it arguably warranted a `[no-qa-evidence]` opt-out. This directory records that determination retroactively.
- **No captured runtime transcript was recorded at commit time** under `docs/qa/`. This directory is retroactive documentation.

Honesty statement

Reconstructed documentation. NO faked PASS logs, NO fabricated runtime output. Asserted verification = the in-commit config unit-test delta visible in `git show 3ce30285`.
