Retroactive QA evidence — commit c63c8963 (run-id round468c)

RECONSTRUCTED, AFTER-THE-FACT DOCUMENTATION (HXC-039, §11.4.83). This file is NOT a captured-at-the-time end-user transcript. It is honest retroactive documentation created during the HXC-039 §11.4.83 back-fill, operator-
authorised, to give a pre-existing feature commit its required docs/qa/<run-id>/evidence directory WITHOUT rewriting git history. No runtime output below is fabricated (§11.4.6 / §11.4.123).

Field	Value
Commit SHA	c63c896321f6f4081a1d36450b9baa366ede869e
Short SHA	c63c8963
Authored	2026-06-04T12:33:56+05:00
Subject	feat(meta): Wave4b — FAISS honest relabel, consensus multi-peer transport, +2 pointer bumps (round468c)
run-id basename	round468c (a verbatim substring of the commit subject)

What the commit changed (from git show --stat)

```

“Wave4b”: an honest relabel of the FAISS memory provider (faiss_provider.go) and a multi-peer transport for worker consensus (consensus.go), plus 2 pointer bumps.

Verification that exists for this commit

- **Two paired test files updated/added in the SAME commit:** memory/providers/faiss_provider_test.go (FAISS relabel) and worker/consensus_election_test.go + consensus_test.go (multi-peer consensus).
Run: go test ./internal/memory/providers/... ./internal/worker/...
- The FAISS change is explicitly an **honest relabel** (anti-bluff: making the provider’s reported capability match reality) — the paired test asserts the corrected behaviour.

- **No captured runtime transcript was recorded at commit time** under `docs/qa/`. This directory is retroactive documentation.

Honesty statement

Reconstructed documentation. NO faked PASS logs, NO fabricated runtime output. Asserted verification = the in-commit FAISS + worker unit-test deltas visible in `git show c63c8963`.
