SP0b — CONST-055 Post-Constitution-Pull Validation Audit (REPORT-ONLY)

Revision	1
Created	2026-06-10
Last modified	2026-06-10
Status	active
Mode	READ-ONLY audit — identifies violations, fixes nothing
HEAD at audit	e547d4db (2026-06-10 13:41:24 +0500)
Authority	CONST-055 / §11.4.32 (post-constitution-pull validation sweep)

Table of contents

- [1. Scope and method](#)
 - [2. Gates run \(real output captured\)](#)
 - [3. Findings table](#)

1. Scope and method

This is the “Before we begin” CONST-055 post-constitution-pull validation sweep, executed in REPORT-ONLY mode. No code edited, no commit, no push. The only write is this document.

Tooling located under `scripts/`: - `scripts/verify-all-constitution-rules.sh` (the CONST-055 runner; 14 gates G1–G14) — **read-only** (greps + delegated gate scripts; the only `git rm` token is inside a fix-suggestion string, line 254, never executed). RAN. - `scripts/verify-governance-cascade.sh` — read-only cascade verifier. RAN. - `scripts/no-silent-skips.sh` — read-only `t.Skip()/describe.skip` scanner. RAN. - `scripts/install-git-hooks.sh` + `scripts/git_hooks/` — hook installer (NOT run; would mutate `.git/hooks`). Inspected only.

2. Gates run (real output captured)

G — `verify-governance-cascade.sh` → `=== Result: 0 failures === / PASS. 14 governance anchors × consumer fleet; every owned + third-party submodule resolved (third-party correctly listed in submodule_third_party.txt).`

CONST-055 sweep — `verify-all-constitution-rules.sh --quiet` → Gates run: 14 / Failures: 3: - **G8 FAIL** §11.4.90 — docs/Fixed.md ## HXC-044 has Obsolete status but no ****Obsolete-Details:**** line within 8 non-blank lines. - **G12 FAIL** §11.4.12/91 — docs/Fixed_Summary.md stale vs trackers (Last regenerated: 2026-06-09, expected 2026-06-10). - **G14 FAIL** §11.4.106 — docs_chain verify --all reports drift: fixed STALE [fixed_html fixed_summary], issues STALE [issues_html issues_summary]. - (G1–G7, G9–G11, G13 PASS.)

`no-silent-skips.sh` → 167 bare skips (head showed 15, “+152 more”). ALL hits are under submodules/helix_agent/cli_agents/continue/** — i.e. a **third-party vendored** CLI agent tree, not HelixCode-owned code. Treated as low-severity/out-of-scope (third-party exempt), but noted.

Anti-bluff smoke (CONST-035, CLAUDE.md §9 pattern) → `bluff-count: 0` over `helix_code/internal+helix_code/cmd`. PASS.

3. Findings table

Severity: P0 = release blocker per cited mandate; P1 = high; P2 = medium; P3 = low/advisory. “SP” = suggested fix-owner work-package.

#	Rule	Status	Severity	Evidence	Suggest
F1	§11.4.75 mechanical git-hook enforcement	FAIL	P0	<code>.git/hooks/</code> contains ONLY *.sample files; no pre-commit/pre-push/post-commit/commit-msg installed (<code>core.hooksPath</code> = default). Source dir <code>scripts/git_hooks/</code> ships ONLY pre-push — the other 3 hooks §11.4.75 mandates are not even present to install.	SP-hook hooks in git_ho git-ho (mutation
F2	§11.4.90 Obsolete-Details (G8)	FAIL	P1	<code>docs/Fixed.md:211## HXC-044 ...</code> — no **Obsolete-Details:** line within 8 non-blank lines (Evidence: + summary present, but not the required Since/Reason/Superseding/Triple-check line).	SP-track Detail HXC-04 Obsolete
F3	§11.4.12/91 summary freshness (G12)	FAIL	P1	<code>docs/Fixed_Summary.md:15</code> footer Last regenerated: 2026-06-09; trackers advanced to 2026-06-10. Diff: 113 total closed counted but timestamp stale.	SP-docs: genera (+ issues tracke
F4	§11.4.106 docs_chain sync (G14)	FAIL	P1	<code>docs_chain verify --all:</code> fixed STALE [fixed_html fixed_summary], issues STALE [issues_html issues_summary]. .html/.pdf siblings older than .md.	SP-docs: all -- resolves
F5	CONST-044 CONTINUATION freshness	FAIL	P1	<code>docs/CONTINUATION.md</code> last git-touch 638bd400 2026-06-09 22:08 but HEAD is e547d4db 2026-06-10 13:41 (LLMs-access	SP-conti CONTIN

#	Rule	Status	Severity	Evidence	Suggest
				roadmap + 6 SP plans landed AFTER CONTINUATION's last update). CONTINUATION did not advance with the state-advancing commit → out-of-sync = CRITICAL DEFECT per Art. XIII §13.1.	the SP-p commit
F6	CONST-036 hardcoded model lists (D-5)	FAIL	P1	helix_code/internal/llm/ model_discovery.go:1200-1209 getFallbackAlternatives returns hardcoded model-name slices (codellama-7b-instruct, mistral-7b-instruct, llama-3-8b-instruct, gemma-7b-instruct, ...). Not verifier-sourced.	SP-llm: from LL CONST- last-reso
F7	CONST-036 hardcoded model default (D-1)	PARTIAL	P2	helix_code/cmd/cli/ main.go:206,341 DefaultModel: "llama3.2"; :1167,1503 default flag "llama-3-8b". Mitigated: :1503-1507 replaces the generic default with c.llmProvider.GetModels()[0] at runtime (live query). The literal default remains a hardcoded model name but is a documented fallback, not a displayed model list.	SP-llm: verifier;
F8	§11.4.65/106 third-party doc- sync (advisory)	UNKNOWN	P3	docs_chain drift limited to issues/fixed; governance in-sync. No evidence of broader INCLUDED-scope staleness sampled this run.	— (resol
F9	CONST-053 tracked secrets/ artifacts	PASS	—	git ls-files \ grep -E '\. (env\ pem\ key)\ id_rsa' (excl .example/.sample/.full-test) = 0; no extensionless /bin/ binaries tracked. 10 *.log tracked but all under docs/**/evidence/ + docs/ improvements/ = reference/captured- evidence assets (CONST-053 class-5 “unless reference assets” exemption). Root .gitignore present (195 lines).	—
F10	CONST-035 production bluff smoke	PASS	—	bluff-count: 0 over helix_code/internal + helix_code/cmd.	—
F11	CONST-046 hardcoded user- facing strings (sample)	PASS (sampled)	P3	CLI generate path uses tr(ctx, "cli_...") il8n (main.go:1510-1511). Only fmt.Printf("Error: %v\n", err) (main.go:2077) and ~3 similar dev-facing error prints — error wrapping, not localized user-flow content.	SP-il8n fmt.Pr il8n if u

#	Rule	Status	Severity	Evidence	Suggest
				No hardcoded question/prompt arrays found.	
F12	no-silent-skips (third-party)	UNKNOWN/ exempt	P3	167 bare *.skip() all under submodules/helix_agent/cli_agents/continue/** (third-party vendored). No HelixCode-owned bare skips surfaced.	— (third

4. Detail notes

- **F1 is the highest-severity finding.** §11.4.75 demands FIVE mechanical enforcement layers; the repo has neither the installed hooks (only .sample) nor even the source for 3 of the 4 mandated hooks. This is the structural reason the other doc-sync drifts (F2–F5) reached HEAD un-blocked — there is no local pre-commit/pre-push gate stopping them.
- **F3 + F4 + F5 are one mechanical-drift cluster:** a state-advancing commit (e547d4db, the LLMs-access SP planning bundle) landed without re-running the doc-sync/summary/CONTINUATION regeneration. A single docs_chain sync --all + summary regen + CONTINUATION update would clear F3/F4/F5.
- **F6/F7 (CONST-036)** match the D-1/D-5 patterns referenced in the task. The cli default (D-1/F7) is runtime-overridden by a live GetModels() query so it is largely mitigated; the model_discovery.go fallback slices (D-5/F6) are genuine static model-name literals with no verifier sourcing.
- Governance cascade (G1) and anti-bluff smoke are clean — the violations are concentrated in doc-sync mechanics, the missing hook layer, and LLM fallback hardcoding.

5. Summary

CONST-055 POST-PULL AUDIT — 2026-06-10 — REPORT-ONLY (no fixes applied)
 Gates run: verify-governance-cascade (PASS, 0 fail) | verify-all-constitut
 (14 gates, 3 FAIL: G8/G12/G14) | no-silent-skips (167 third-party only)
 CONST-035 bluff smoke (0 hits, PASS).

Violations by severity: P0 = 1 (F1) | P1 = 5 (F2 F3 F4 F5 F6) | P2 = 1 (F7)
 P3/advisory = 3 (F8 F11 F12). PASS: F9 F10.

Top 5 to fix (priority order):

1. F1 §11.4.75 — no git hooks installed (only .sample); 3 of 4 mandated not even present in scripts/git_hooks/. [P0, SP-hooks]
2. F5 CONST-044 — docs/CONTINUATION.md out-of-sync with HEAD e547d4db (CRITICAL per Art. XIII §13.1). [P1, SP-continuation]
3. F4 §11.4.106 — docs_chain drift: issues/fixed html+summary STALE; run docs_chain sync --all (also clears F3). [P1, SP-docs]
4. F2 §11.4.90 — Fixed.md HXC-044 missing Obsolete-Details line. [P1, S]
5. F6 CONST-036 — model_discovery.go:1200-1209 hardcoded fallback model (D-5), not verifier-sourced. [P1, SP-llm]

Note: nothing was fixed; all items are referred to suggested SP work-packa
