

USER_MANUAL_EXPANSION_PLAN

User Manual Expansion Plan

Goal: Update documentation to cover new features and providers.

1. New Provider Guides

- **Anthropic/Claude:**
 - Configuration (`config.yaml` settings).
 - Enabling “Extended Thinking”.
 - Using Prompt Caching.
- **Google Gemini:**
 - Setup and API Keys.
 - Using Multimodal features (Images/Video).
- **Enterprise Providers (AWS/Azure):**
 - IAM/Entra ID Authentication setup.
 - Region selection and deployment.

2. Advanced Feature Guides

- **Memory System:**
 - “Choosing the Right Vector DB” (Comparison of Zep, Weaviate, etc.).
 - Configuring persistence.
- **Tool Usage:**
 - “Safe Shell Execution”: How to configure the sandbox.
 - “Web Tools”: How to enable and use search.

3. Developer Guides

- “Creating a Custom Provider”: Step-by-step tutorial.
- “Adding a New Tool”: Using the MCP SDK.

4. Troubleshooting

- Common errors with SSH workers.
- Debugging LLM connection issues.
- Rate limit handling.

Sources verified 2026-05-29: project go.mod + CLAUDE.md §3.1 (planning doc; no third-party operator instructions)

Reviewed against Constitution §11.4.99. This is a forward-looking **expansion plan** — a checklist of guides still to be written (Anthropic/Gemini/AWS/Azure setup, Memory System / vector-DB comparison, sandbox, custom-provider). It contains **no executable third-party setup**

instructions and no version pins to cross-reference against a vendor doc yet — those obligations attach to the future guides when they are authored, at which point each MUST carry its own §11.4.99 footer (fetched Anthropic / Google / AWS / Azure / Zep / Weaviate official docs). Negative finding: nothing in this plan required (or could be) verified against a vendor source this run. Version authority for any guide produced from this plan is `go.mod` + CLAUDE.md §3.1 (Go 1.26 / go1.26.3 latest, PostgreSQL 15+, Redis 7+); provider/model IDs remain LLMsVerifier-runtime-sourced per CONST-036.
