HelixQA bank-vs-server FAIL triage (V&V run, server :18080)

Property	Value
Date	2026-06-24
Server	http://localhost:18080 (fresh, IDLE)
Method	READ-ONLY: curl probes + source read (internal/server/handlers.go, server.go) + bank read (submodules/helix_qa/banks/)
Author	RESPAWN subagent (§11.4.147), data-only (§11.4.6/§11.4.120)

Captured actual responses

```
GET /api/v1/server/info →
{"info":{"database":{"connected":true,"enabled":true},
  "features":
{"auth_enabled":true,"mcp_enabled":true,"notifications_enabled":true,
  "go_version":"1.24","name":"HelixCode Server","redis":
{"connected":true,"enabled":true},

"start_time":"...","uptime":"...","version":"1.0.0"},"status":"succ

POST /api/v1/auth/refresh (no Authorization header) →
HTTP 401 {"message":"Authorization header
required","status":"error"}

POST /api/v1/auth/login (body `not json{`, Content-Type:
application/json) →
HTTP 400 {"error":"invalid character ... looking for beginning
of object key string",
  "message":"Invalid request","status":"error"}
```

Source facts

getServerInfo (handlers.go:1077–1105) emits features from exactly the three capabilities wired into the Server struct (server.go): auth, mcp, notification. There is NO struct field, NO route, and NO info-flag for lsp / plugins / skills / ensemble. Streaming HAS a real route+handler (/api/v1/llm/stream → streamLLM, llm_generate.go:283) but NO info flag.

Package presence in internal/: mcp✓ agent✓ plugins✓; lsp✗ skills✗ ensemble✗.

Per-finding verdict

1. HXC-API-015 — refresh-without-auth → BANK-DRIFT

- Bank (helixcode-full-qa-api.json:389): expect_status:401, expect_body_contains:"authorization" (lowercase).
- Server: 401 ✓ but body says "Authorization header required" (capital A). The substring match is case-sensitive → fails on "authorization".
- Server behavior is CORRECT (401 + clear message). The assertion's literal is wrong.
- **Fix (bank):** change expect_body_contains to "Authorization" (or "Authorization header required").

2. HXC-SEC-010 — malformed-JSON login → BANK-DRIFT

- Bank (helixcode-security-validation.json:208): expect_status:400, expect_body_contains:"invalid_request".
- Server: 400 ✓ (correctly NOT 500), body {"message":"Invalid request",...}. The token invalid_request (snake_case) does not appear; the server uses the human string Invalid request.
- Server behavior is CORRECT (the actual security property — 400 not 500 — holds). The assertion expects a snake_case error code the server never emits.
- **Fix (bank):** change expect_body_contains to "Invalid request".

3. HXC-ENS-001 — ensemble in /server/info → REAL SERVER GAP

- Bank (helixcode-ensemble-members.yaml:72): expect_body_contains:"ensemble" in \$.info.
- Server: not present. No ensemble field/route; internal/ensemble absent (ensemble surfaced via internal/agent/verifier, not advertised in info).
- **Fix (server):** add ensemble advertisement to getServerInfo features (e.g. ensemble_enabled / member descriptor) reflecting the real Helix Agent ensemble wiring, OR — if ensemble is genuinely not a server capability — this becomes BANK-DRIFT. Current code: ensemble is NOT a server-info capability, so server-side decision required (advertise it, or move the assertion off /server/info per §11.4.122 don't silently drop).

4. HXC-LSP-001 — `lsp_enabled` flag → REAL SERVER GAP (conditional)

- Bank (helixcode-lsp.yaml:61): `expect_body_contains:"lsp_enabled"`.
- Server: absent. No `lsp` struct field, no route, `internal/lsp` package absent.
- **Fix:** If LSP is a shipped server capability, add `lsp_enabled` to features. If LSP is NOT implemented in the server, the assertion is asserting an unimplemented feature → either `implement+advertise`, or reclassify the bank item honestly (NOT a metadata-only PASS).

5. HXC-PLUGIN-001 — `plugins_enabled` flag → REAL SERVER GAP

- Bank (helixcode-plugins.yaml:49): `expect_body_contains:"plugins_enabled"`.
- Server: absent from info. BUT `internal/plugins` package EXISTS — the capability is in the codebase, just not wired into the `Server` struct or advertised.
- **Fix (server):** wire plugins into `Server` and add `plugins_enabled` to `getServerInfo` features. This is a genuine info-exposure gap (feature exists, flag omitted).

6. HXC-SKILL-001 — `skills_enabled` flag → REAL SERVER GAP (conditional)

- Bank (helixcode-skills.yaml:49): `expect_body_contains:"skills_enabled"`.
- Server: absent. No `skills` field/route; `internal/skills` package absent.
- **Fix:** same shape as LSP — if `skills` is a server capability, advertise `skills_enabled`; otherwise `implement+advertise` or reclassify honestly.

7. HXC-STREAM-001 — `streaming` flag → REAL SERVER GAP (strongest case)

- Bank (helixcode-streaming.yaml:57): `expect_body_contains:"streaming"`.
- Server: streaming IS genuinely wired — real route `POST /api/v1/llm/stream` → `streamLLM` (`llm_generate.go:283`). The capability WORKS but `getServerInfo` omits any streaming flag.
- **Fix (server):** add `streaming_enabled: true` (capability is real and reachable) to `getServerInfo` features. Clearest “feature enabled but `/server/` info omits it” case.

Summary

Finding	Verdict	Fix side
HXC-API-015	BANK-DRIFT	bank: "authorization"→"Authorization"
HXC-SEC-010	BANK-DRIFT	

Finding	Verdict	Fix side
		bank: "invalid_request"→"Invalid request"
HXC-ENS-001	REAL GAP (or bank if ensemble not a server capability)	server: advertise ensemble in /server/info
HXC-LSP-001	REAL GAP (conditional on LSP being shipped)	server: add lsp_enabled or honestly reclassify
HXC-PLUGIN-001	REAL GAP (pkg exists, flag omitted)	server: wire+advertise plugins_enabled
HXC-SKILL-001	REAL GAP (conditional on skills being shipped)	server: add skills_enabled or honestly reclassify
HXC-STREAM-001	REAL GAP (capability real, flag omitted)	server: add streaming_enabled

2 BANK-DRIFT, 5 REAL SERVER /server/info EXPOSURE GAPs. STREAM and PLUGIN are unambiguous (capability exists/works, flag omitted). ENS/LSP/SKILL are real gaps IF the capability is a server feature; LSP/SKILL packages are absent from internal/, so those two need a server-side decision: implement+advertise, or reclassify the bank item honestly (never a metadata-only PASS).
