

HelixCode — Open Issues Tracker

Per Constitution §11.4.15 (Item-status tracking) + §11.4.16 (Item-type tracking) + §11.4.19 (Fixed-document column-alignment) + CONST-057 (Type-aware closure vocabulary) + CONST-058 (Reopened-source attribution).

Authoritative resumption ledger: docs/CONTINUATION.md (CONST-044). This file complements it with item-level granularity for currently-open work.

Status vocabulary (closed set): Queued | In progress | Ready for testing | In testing | Reopened | Fixed/Implemented/Completed (→ Fixed.md)

Type vocabulary (closed set): Bug | Feature | Task

ISSUE-001 — VisionEngine helix-gitlab remote repo missing (404) — CLOSED (→ Fixed.md)

Status: Completed (→ Fixed.md) **Type:** Task **Discovered:** 2026-05-19 (round 98 — Planning + VisionEngine i18n migration) **Discovered-By:** AI subagent during 4-remote push attempt **Closed-By:** Round 188 (subagent repo-inventory sweep) **Root cause:** The helix-gitlab remote URL in dependencies/HelixDevelopment/VisionEngine/.git/config pointed at git@gitlab.com:HelixDevelopment/visionengine.git — a non-existent group path. The actual GitLab group is helixdevelopment1 (path) / HelixDevelopment (display name). The repository helixdevelopment1/VisionEngine (id 80411994) already existed since 2026-03-19. NOT a missing-repo issue — a URL-misconfiguration issue. **Fix:** git remote set-url helix-gitlab git@gitlab.com:helixdevelopment1/VisionEngine.git in the VisionEngine submodule, then git push helix-gitlab master (FF-safe: local was 46 commits ahead, remote 0 ahead). Push landed at SHA 2d0c35b (verified via git ls-remote helix-gitlab master). The Upstreams recipe push-helix-gitlab.sh references the remote by name (not URL), so it continues to work unchanged. **Evidence:** - glab api projects/helixdevelopment1%2Fvisionengine → id 80411994 OK -

git ls-remote helix-gitlab HEAD →
2d0c35bebb199a9a199fbf899eaeb292e38eaf17 (matches local HEAD) -
Original broken URL still 404s when probed directly (proves URL
was the issue, not perms)

ISSUE-002 — VisionEngine vasic- digital-github fork lineage divergent at SHA 93c830a

Status: Queued — BLOCKED on operator (CONST-061 merge-first investigation) **Type:** Bug **Discovered:** 2026-05-19 (round 98)
Discovered-By: AI subagent during 4-remote push attempt
Evidence: vasic-digital-github HEAD 93c830a carries
round-48/52/57 commits absent from HelixDevelopment local
main. Non-FF push rejected. NO force-push attempted
(CONST-043). **Resolution path:** Operator-led CONST-061 merge-
first pipeline — fetch divergent commits, audit conflict surface,
integrate or document divergence as intentional fork, then either
FF-push or designate one lineage as canonical.

ISSUE-003 — HelixLLM internal/agents/ tools/analysis_test.go hardcoded absolute path

Status: Fixed (→ Fixed.md) **Type:** Bug **Discovered:** 2026-05-19
(round 95 — HelixLLM migration; surfaced as pre-existing failure)
Discovered-By: AI subagent during HelixLLM standalone test
run **Closed-By:** Round 105 (commit a5e56d4 in HelixLLM; meta
pointer fedd152) **Attribution correction:** Originally documented
as helix_agent; actual location is HelixLLM submodule
(dependencies/HelixDevelopment/HelixLLM/internal/agents/tools/).
Commit SHAs 0a84310 resolved there. **Resolution:** Replaced
hardcoded path with t.TempDir() + 2 synthesised fixture files.
Bonus: same bug-pattern discovered in git_test.go (constant
helixLLMRoot + 7 tests) — refactored gitSandbox() signature. 6 tests
now PASS on any host. Mutation verified.

ISSUE-004 — HelixLLM internal/gateway/middleware TOON WriteTOON returns 500

Status: Fixed (→ Fixed.md) **Type:** Bug **Discovered:** 2026-05-19 (round 95) **Discovered-By:** AI subagent **Closed-By:** Round 105 (commit a5e56d4) **Attribution correction:** Originally documented as helix_agent; actual location is HelixLLM submodule. Commit 6f11c56 resolved there. **Resolution:** Root cause was vasic-digital/TOON's round-27 anti-bluff change (Marshal returns ErrTOONEncodingNotImplemented unconditionally) combined with WriteTOON treating ANY Marshal error as 500. Fix: fall back to json.Marshal while preserving application/toon Content-Type (matches ContentNegotiation middleware). 500 still returned for genuinely unmarshallable values (channels). 19 middleware tests now PASS. Mutation verified.

ISSUE-005 — CONST-052 rename programme: meta-repo directories still PascalCase

Status: Queued **Type:** Task **Discovered:** 2026-05-15 (CONST-052 cascade landed) **Discovered-By:** Constitution **Evidence:** Meta-repo directories like helix_code/, challenges/, helix_qa/, helix_agent/ still PascalCase despite CONST-052 mandating snake_case. Renames deferred because they break path-encoded references throughout governance docs, CI scripts, and tracker URLs. **Resolution path:** Phased migration per CONST-052 §11.4.29: comprehensive brainstorming → phase-divided plan → fine-grained tasks → every change covered by every applicable test type. Round 88 made partial progress (3 submodules with drift fixed) but root directories remain.

ISSUE-006 — Round-74 residual LOGIC-class FAILs (CLOSED)

Status: Fixed (→ Fixed.md) **Type:** Bug **Discovered:** 2026-05-19 (round 74 — release-gate-test.sh creation; classified by round 89) **Discovered-By:** AI release-gate sweep **Closure progress:** - ✓ HelixMemory: closed round 106 (commit 69016df — single-line go.mod fix; 6 FAIL → 0 FAIL) - ✓ vasic-digital/Planning: round 107 NO-OP — 275 PASS / 0 FAIL / 20 SKIP-OK; likely incidentally fixed by round 98 i18n migration - ✓ helix_agent inner: closed round 109 (commit 0f492e98 — 5 test-side bluff fixes, zero production changes) **Evidence:** Round 74 surfaced 26 FAILs across

submodules; rounds 82-87 closed 19; this Issue tracked the residual 7 across 3 submodules. All 3 components closed by rounds 106 + 107 + 109. **Follow-ups surfaced (NEW issues to file):** 4 helix_agent handler tests previously masked by mid-run panic (now visible) + 3 build-failed packages depending on sibling submodule API drift (digital.vasic.debate) + 2 LOGIC FAILs reclassified as cross-cutting work (venice CONST-037 model-wiring + compliance CONST-051 architectural reconciliation). See ISSUE-009 through ISSUE-013 (TBD next sweep).

ISSUE-009 — helix_agent handler tests surfaced after round-109 fix

Status: Queued **Type:** Bug **Discovered:** 2026-05-19 (round 109) **Discovered-By:** AI subagent (helix_agent LOGIC audit) **Evidence:** Mid-run panic in TestIsProviderAvailable_NotAvailable aborted test binary; round 109's fix unblocked execution, surfacing 4 pre-existing FAILs: TestFormattersHandler_FormatCode_UnsupportedLanguage, TestEmbeddingHandler_WithRealManager, TestGetTaskResources, TestGetTaskLogs. Out of round-109's 5-fix cap. **Resolution path:** Per-handler investigation, similar to round 109's test-side bluff pattern.

ISSUE-010 — helix_agent 3 build-failed packages (sibling submodule API drift)

Status: Queued — BLOCKED on cross-submodule coordination **Type:** Bug **Discovered:** 2026-05-19 (round 109) **Discovered-By:** AI subagent **Evidence:** 3 packages in helix_agent depend on digital.vasic.debate API surface that changed; build fails with type/method mismatches. Pre-existing. **Resolution path:** Either rebuild the consuming code to new debate API OR pin older debate version in helix_agent go.mod. Cross-submodule coordination required.

ISSUE-011 — venice TestGetCapabilities model-list drift (CONST-037)

Status: Queued — needs CONST-037 canonical-model wiring **Type:** Bug **Discovered:** 2026-05-19 (round 109) **Discovered-By:** AI subagent **Evidence:** Test hardcodes venice-uncensored as expected model; Venice API no longer returns it. CONST-037

mandates LLMsVerifier as single source of truth for model metadata. **Resolution path:** Replace hardcoded expectation with LLMsVerifier dynamic lookup OR pin against a stable model that's not subject to vendor list changes.

ISSUE-007 — CONST-046 migration backlog (57,329 violations baselined; shrinking)

Status: In progress **Type:** Feature **Discovered:** 2026-05-19 (round 92 — audit script) **Discovered-By:** AI subagent ground-truth scan **Evidence:** Round-92 scan reported 57,345 violations across 21,937 files. Round 99b baseline collapsed to 54,803 unique (path, literal_hash) keys. Phase 4 (rounds 100+) systematically migrating top-concentration files: round 100 (evaluators.go), 101 (challenge_recorded_ai_testgen.go), 102 (challenge_desktop.go) — see CONTINUATION.md close-outs. **Resolution path:** Continued Phase 4 cadence; audit-gate --fail-on-new already enforced; each migration round MUST re-run --update-baseline so snapshot shrinks toward zero.

ISSUE-008 — helix_qa intermittent TestPerformance flake (host-load-sensitive)

Status: Queued — BLOCKED on operator (host topology decision) **Type:** Bug **Discovered:** 2026-05-19 (round 82) **Discovered-By:** AI subagent **Evidence:** helix_qa TestPerformance fails intermittently under high host load (concurrent containers + builds). Not a code bug per se; a sensitivity issue. **Resolution path:** Either (a) loosen timing tolerance with explicit comment + reference to host topology, or (b) gate the test behind a HOST_LOAD_DEDICATED=1 env var to run only on quiescent hosts. Operator decision needed.

Last regenerated: 2026-05-19. To update Issues_Summary.md mechanically, run scripts/generate_issues_summary.sh (TODO: create — currently this Issues.md is the source of truth and Summary is hand-maintained).
