

ported_cli_agents

Ported cli_agents capabilities

Evidence-backed inventory of capabilities **actually ported into HelixCode** from the cli_agents/ reference catalogue (51 vendored reference agents). Per CONST-035 anti-bluff: this lists ONLY capabilities with landed code evidence (package doc.go origin headers, CONTINUATION.md P2-Fxx CLOSED ledger, POWER_FEATURES_PORTING_PLAN rev2 file:line reconciliation, git port commits) — NOT every cli_agent’s full feature set. Planned-but-not-landed items are marked Dev=absent/partial honestly. **No feature is  yes** (no recordings analyzed for ported features). **Overall is never confirmed** (a confirmed rollup requires an analyzed video).

Evidence basis: (1) CONTINUATION.md ports ledger lists P2–F21. .P2–F30 as CLOSED with landing packages; (2) each landed package’s doc.go names its source agent (“aider voice input port P2-F27”, “Roo-code CLI agent port”, “Continue.dev IDE integration”, “Go port of upstream gptme’s profile mechanism”); (3) POWER_FEATURES_PORTING_PLAN.md rev2 reconciles Phase-1 against HEAD with file:line; (4) HXC-031-codex-cline-port.md is DRAFT (plan only, NO code) — codex multimodal + cline computer-use are PLANNED, not landed.

Area	Component (HelixCode pkg)	Feature	Dev	Wired	Real-us
service	internal/approval	Approval/exec-policy modes (per-tool yes/no, autopilot tiers)	done	yes	unknown
service	internal/autocommit	Git auto-commit per change (generated msg, secret-filter, summariser)	done	yes	unknown
service	internal/tools/browser	Browser tool suite (launch/click/type/scroll/screenshot via chromedp)	done	yes	unknown
service	internal/projectmemory	Project-memory context files (AGENTS.md/.clinerules-style loader+watcher)	done	yes	unknown
service	internal/plantree	Plan trees (branching persistent implementation plans, JSON-backed)	done	yes	unknown
service	internal/session (condense.go)	Context compaction / history condense (CompactIfNeeded/ShouldCompact)	done	yes	unknown
service	internal/workspace		done	partial	unknown

Area	Component (HelixCode pkg)	Feature	Dev	Wired	Real-us
		Container per-task workspace (Docker/Podman mount, TTL cleanup)			
service	internal/voice	Voice-to-code input (arecord/sox capture, Whisper API + whisper.cpp fallback)	done	yes	unknown
service	internal/repomap	Repo-map (tree-sitter ranked incremental project map)	done	yes	unknown
service	internal/kilocode	AST-aware refactoring (cross-file rename, impact/call-graph, extract/move/inline)	done	yes	unknown
service	internal/roocode	Roo-code full port (task delegation, template gen, diff review, conv memory)	done	yes	unknown
application	internal/continua	Continue.dev IDE integration (inline completions, editor, chat panel, diff, model selector)	done	partial	unknown
service	internal/agent/profiles	Verifier work profile + RoleVerify posture (subagent review/validation)	done	yes	unknown
application	cmd/cli (main.go:2118,2326) + autocommit/git.go	/undo + /diff (git-aware, force-push-free revert)	done	yes	unknown
service	internal/workflow/ autonomy	Configurable autonomy presets (None/Basic/BasicPlus/SemiAuto/FullAuto, 5 tiers)	done	yes	unknown
service	internal/workflow/ planmode	First-class Plan/Act mode controller (tool-gated by mode)	done	yes	unknown
service	internal/tools/askuser	ask_user interactive clarification tool	done	yes	unknown
service	internal/commands (markdown_skills.go)	Markdown skills subsystem (project>user 2-tier precedence)	partial	yes	unknown
service	internal/checkpoint	Workspace file-snapshot checkpoint + /checkpoint create/list/restore	done	yes	unknown
application	cmd/cli (main.go:1727)	Per-request token-usage counter (real provider Usage, anti-fabrication)	done	yes	unknown
service	(no production code)	Context-window-% indicator	absent	no	no
service	(no production code)	TODO/step tracker surface (/tasks is background-job list, not TODO tracker)	partial	partial	no
service	markdown_skills.go	SKILL.md built-in/bundled tier + canonical SKILL.md filename	absent	no	no
service	internal/llm (HXC-031 plan)	Codex multimodal image-content LLM request surface	absent	no	no

Area	Component (HelixCode pkg)	Feature	Dev	Wired	Real-us
service	internal/tools/browser (HXC-031 plan)	Cline computer-use feedback loop (screenshot-per-action coord control)	absent	no	no
service	(planned, POWER_FEATURES F22)	Cumulative diff-review sandbox (stage-before-apply, apply/reject hunks)	absent	no	no
service	(planned, POWER_FEATURES F25)	Conversation branches / fork	absent	no	no
service	(planned, POWER_FEATURES F36/F43)	/rewind + Tangent mode	absent	no	no
service	(planned, POWER_FEATURES F18)	Messaging connectors (Slack/ Telegram/Discord)	absent	no	no
service	(planned, POWER_FEATURES F35)	ACP mode (Agent Client Protocol over stdio)	absent	no	no
service	(planned, POWER_FEATURES F56)	OpenAI-compatible server endpoints	absent	no	no
service	(planned, POWER_FEATURES F61)	Spec-driven workflow surface (specify→plan→tasks→implement)	absent	no	no
service	(planned, POWER_FEATURES F33)	OS-level exec sandbox (Seatbelt/ Landlock/bwrap)	absent	no	no

Count: 33 rows total — **20 landed ports** (Dev=done, working-untaped), **3 partial-landed** (workspace, continua, markdown-skills), **10 planned/not-landed** (Dev=absent/partial, gap). Zero 📄 yes; zero confirmed.

Honest assessment: The **Phase-2 port wave (P2-F21..F30) genuinely landed** — 10 named source-agent ports (codex/aider/cline/plandex/openhands/kilo-code/roo-code/continue) ship as real packages with origin-attributed doc.go headers, unit tests, and CONTINUATION CLOSED records, plus the gptme verifier-profile port. The **POWER_FEATURES Phase-1 wrap (autonomy/Plan-Act/undo-diff/ask_user/skills/ token-count/checkpoint) is largely landed** per the rev2 file:line reconciliation. Beyond that, the porting is **mostly PLANNED, not landed**: POWER_FEATURES_PORTING_PLAN is explicitly “DRAFT — research + plan only, NO code”, its Phases 2–7 (diff-sandbox, branches, rewind, tangent, connectors, ACP, OpenAI server, spec-driven, OS sandbox) are unimplemented, and HXC-031 (codex multimodal + cline computer-use) is a DRAFT plan with no code. No ported feature has an analyzed recording, so none can be confirmed; all landed ports are honestly working-untaped pending video V&V.

REPO-STATE-DERIVED (per §11.4.99 the sources are the cross-referenced repo trees + in-repo ledgers, following the docs/ARCHITECTURE.md precedent — the cli_agents/ reference catalogue is vendored third-party, but the CLAIM here is which of its capabilities have LANDED in HelixCode's own code, evidenced repo-side). Cross-referenced against the live tree on 2026-06-22: -

cli_agents/* = 50 directories present (the reference catalogue this slice draws from; note _status_header.md/this doc's prose says "51 vendored reference agents" — live ls count is **50**, a minor count drift to reconcile). - Landed ports are evidenced by package doc.go origin headers under helix_code/internal/*, the docs/CONTINUATION.md P2-Fxx CLOSED ledger, and the POWER_FEATURES_PORTING_PLAN.md rev2 file:line reconciliation — not by the upstream agents' full feature sets. - **Negative finding restated:** docs/plans/HXC-031-codex-cline-port.md is a DRAFT plan with NO code (codex multimodal + cline computer-use PLANNED, not landed) — the doc already marks these honestly; no green bluff. - No external-service version claim in this doc → no upstream-staleness check applies (the vendored cli_agents/ are pinned reference copies, not a live service this doc instructs against).
