

xiaomi-status_summary

Xiaomi MiMo Provider — Status Summary

Status:  Implemented **Date:** 2026-06-19 **Models:** 10 (text gen, ASR, TTS) **Tests:** All passing (unit, integration, stress, chaos) **Evidence:** Live API verification captured

Sources verified 2026-06-22: [helix_code/internal/llm/xiaomi_provider.go](#) , [helix_code/internal/llm/XIAOMI_PROVIDER.md](#) , <https://github.com/XiaomiMiMo/MiMo>

Cross-referenced this summary against the in-repo provider source and the external Xiaomi MiMo upstream (fetched/read 2026-06-22). Findings: - **“10 models” confirmed from repo source.** [helix_code/internal/llm/xiaomi_provider.go](#) defines exactly 10 model entries — `mimo-v2.5-pro`, `mimo-v2.5`, `mimo-v2-pro`, `mimo-v2-omni`, `mimo-v2-flash`, `mimo-v2.5-asr`, `mimo-v2.5-tts`, `mimo-v2.5-tts-voiceclone`, `mimo-v2.5-tts-voicedesign`, `mimo-v2-tts` — with `TranscribeAudio()` (ASR) + `SynthesizeSpeech()` (TTS) endpoints against base URL <https://api.xiaomimimo.com/v1>. The “10 (text gen, ASR, TTS)” claim is accurate against the implementation (the implementation IS the source of truth for this provider per CONST-036/037 + §11.4.35). - **Negative finding (external corroboration gap — important).** The public upstream github.com/XiaomiMiMo/MiMo documents the open-source **MiMo-7B** family (Base / RL-Zero / SFT / RL / RL-0530), explicitly math/code-reasoning and “NOT multimodal, ASR, or TTS.” It does NOT corroborate the commercial **MiMo-V2.5** API lineup (omni-modal / ASR / TTS) this provider targets. The authoritative source for the V2.5 commercial endpoint is the key-gated <https://api.xiaomimimo.com/v1> service (a public GET of its root returns 404 without an API key/path — expected), NOT the open-source MiMo-7B repo. Anyone validating these model IDs must do so against a live keyed call to the commercial endpoint, not the public GitHub repo. - **External model-family is genuinely third-party.** Anthropic’s models overview (platform.claude.com) lists no Xiaomi/MiMo models — confirming MiMo is an external provider integrated via HelixCode’s OpenAI-compatible surface, not an Anthropic offering.
