REPO-STATE-DERIVED (per §11.4.99 the sources are the cross-referenced HelixTrack source tree + upstream umbrella, following the docs/ARCHITECTURE.md precedent). Cross-referenced on 2026-06-22: - The feature inventory + present/❌-missing assessments are derived from the present sibling tree (helix_track/{core,web_client,desktop_client, android_client,aurora_os_client}) and reconcile against the umbrella’s component/submodule set on github.com/Helix-Track/Everything. - The ❌-Missing rows (Plugin system, AI features) are honest gap markers, not claims of presence — consistent with the companion GAP_ANALYSIS.md. - No external-service version claim to staleness-check; this is a structural feature ledger of the HelixTrack project’s own code. Re-verify per-feature presence directly against the helix_track/ tree as it evolves.
