

UI_UX_FINDINGS

HelixTrack UI/UX Findings — Main Stream Analysis

Date: 2026-06-21

Web Client (Angular 19)

Dashboard

- **Status:** Basic placeholder — needs comprehensive redesign
- **Issues:** Static cards, no real data, no animations, no widgets
- **Recommendation:** Implement real dashboard with charts, stats, recent activity

Kanban Board

- **Status:** Well-implemented with CDK drag-and-drop
- **Strengths:** WIP limits, column management, ticket cards
- **Issues:**
 - Hardcoded colors (rgba(0,0,0,...)) instead of CSS variables
 - No animations on drag operations
 - No smooth transitions on card movements
 - Background color #f5f5f5 instead of theme variable
- **Recommendation:** Apply theme variables, add drag animations

Theme System

- **Status:** Comprehensive CSS custom properties
- **Colors:** Lime Green #BCE63B, Teal #7AA590, Mint #B2E3C2
- **Issues:**
 - Some components use hardcoded colors instead of variables
 - Missing dark theme implementation
 - Inconsistent use of design tokens
- **Recommendation:** Enforce theme variables everywhere, implement dark mode

Component Library

- **Status:** Uses Angular Material
 - **Strengths:** Consistent Material Design components
 - **Issues:**
 - Some custom components don't follow Material patterns
 - Missing custom HelixTrack component library
 - **Recommendation:** Create HelixTrack-specific component library
-

Desktop Client (Tauri + Angular)

Window Management

- **Status:** Basic Tauri configuration
- **Issues:**
 - Default window size 800x600 (too small)
 - No window state persistence
 - No native menu configuration
 - No system tray integration
- **Recommendation:** Implement proper window management

Native Integration

- **Status:** Minimal
 - **Missing:**
 - System tray icon
 - Global keyboard shortcuts
 - Native notifications
 - File drag-and-drop
 - Auto-updater
 - **Recommendation:** Add native desktop features
-

Android Client (Kotlin + Compose)

Architecture

- **Status:** Good architecture with Hilt DI
- **SDK:** compileSdk 35, minSdk 29
- **Strengths:** Modern Kotlin, Jetpack Compose, Navigation component

UI/UX

- **Status:** Needs investigation
 - **Missing info:** Component structure, theme implementation, animations
-

iOS Client (SwiftUI)

Architecture

- **Status:** SwiftUI with GRDB, Lottie, Markdown UI
- **Platforms:** iOS 16+, macOS 13+
- **Strengths:** Modern SwiftUI, good dependency choices

UI/UX

- **Status:** Needs investigation
 - **Missing info:** View structure, theme implementation, animations
-

Cross-Platform Issues

Consistency

- **Issue:** Each client may have different UI/UX
- **Recommendation:** Create shared design system

Theme

- **Issue:** Brand colors defined differently per platform
- **Recommendation:** Create centralized design tokens

Animations

- **Issue:** Inconsistent animation quality
 - **Recommendation:** Define animation standards
-

Priority Items

High Priority

1. **Dashboard redesign** — Real data, widgets, charts
2. **Theme enforcement** — CSS variables everywhere
3. **Dark mode** — Implement across all clients
4. **Animations** — Smooth transitions, micro-interactions

Medium Priority

1. **Component library** — HelixTrack-specific components
2. **Desktop native features** — System tray, notifications
3. **Responsive design** — Mobile-friendly web client

4. Accessibility — WCAG compliance

Low Priority

1. **Performance optimization** — Virtual scrolling, lazy loading
 2. **Advanced animations** — Lottie, complex transitions
 3. **Custom themes** — User-configurable themes
-

Sources verified 2026-06-22: /Volumes/T7/Projects/helix_track/web_client/package.json , /Volumes/T7/Projects/helix_track/desktop_client/package.json , <https://github.com/Helix-Track/Everything>

REPO-STATE-DERIVED (per §11.4.99 the sources are the cross-referenced HelixTrack client source, following the docs/ARCHITECTURE.md precedent). Cross-referenced on 2026-06-22: - **Angular 19 CONFIRMED:** both helix_track/web_client/package.json and desktop_client/package.json pin "@angular/core": "^19.0.0". This doc's "Web Client (Angular 19)" heading is accurate. - **Honest in-progress markers preserved:** the cross-referenced WEB_CLIENT_ANALYSIS.md / DESKTOP_CLIENT_ANALYSIS.md are explicitly tagged "(pending subagent)" — the doc does not claim findings it has not produced. - This is a UI/UX findings doc for HelixTrack's own clients; no external-service version claim to staleness-check beyond the Angular pin (confirmed current to the source). Re-confirm the framework version from the client package.json files as they upgrade.
