

HelixCode — Fixed Items Tracker

Per Constitution §11.4.19 (Fixed-document column-alignment) + CONST-057 (Type-aware closure vocabulary: Bug → Fixed, Feature → Implemented, Task → Completed, all with (→ Fixed.md) suffix preserved).

This file is a **closure ledger** — items migrate here from docs/Issues.md ONLY after positive captured-evidence per §11.4.5.

Round 189 prefix convention: Closures originally tracked as ISSUE-NNN are now annotated with their new scope prefix and the legacy ID preserved in parentheses (e.g. HXL-001 (ex-ISSUE-003)) for git-history traceability. See docs/Issues.md “Prefix convention” for the full mapping table.

Authoritative round-by-round narrative: docs/CONTINUATION.md (CONST-044). Each row below points to the relevant close-out section there. Items predating the round-system are not retroactively captured (would be impractical) — they live in commit history + the docs/improvements/evidence chain (P0-P5 phases).

Closure	Title	Type	Status	Round
2026-05-20	OPS-001: LLMOps 2 pre-existing CreatePromptExperiment test failures	Bug	Fixed (→ Fixed.md)	397

2026-05-19 | HXA-003 (ex-ISSUE-011): venice TestGetCapabilities
CONST-037 model-list drift | Bug | Fixed (→ Fixed.md) | 190 |
helix_agent (round-190) + meta pointer-bump | Replaced
hardcoded venice-uncensored + llama-3.3-70b literals with
structural assertion (NotEmpty + venice-uncensored* family
substring scan); SKIP-OK CONST-035 marker on full-family
rotation; mutation-verified revert→FAIL / restore→PASS |
2026-05-19 | HXC-004: recovery-batch 4-package under-
verification (llm + logo + notification test-assertion drift +
performance translator.go build break) | Bug | Fixed (→ Fixed.md)
| 200 | (this commit) | Round-200 §11.4: 3 packages had test-
assertion drift after round 161/163/167 i18n migration (tests still

expected pre-i18n English literals; production now emits NoopTranslator-echoed message-IDs
e.g. `internal_llm_wizard_anthropic_apikey_required`,
`internal_logo_open_source_failed`,
`internal_notification_title_task_completed`). Updated 11 test assertions (1 llm + 4 logo + 6 notification + 2 notification additional). 4th package (performance) build-break already fixed inline by parent agent. All 4 packages PASS (llm 51.8s, logo 0.07s, notification 0.89s, performance 8.4s). Mutation-verified per CONST-035: 3 mutations (one per package), revert→FAIL, restore→PASS. |

2026-05-19 | PAN-001: panoptic `appendJSONString` truncates multi-byte UTF-8 runes to bytes (TestResult.MarshalJSON corrupts non-ASCII) | Bug | Fixed (→ Fixed.md) | 302 | panoptic 24aa627 + meta pointer-bump | Replaced `buf = append(buf, byte(r))` with `buf = utf8.AppendRune(buf, r)` in `panoptic/internal/executor/executor.go:120` + added `unicode/utf8` import. Evidence: `go build ./... clean; go test -race -count=1 ./internal/executor/... → ok 4.470s; bash challenges/panoptic_describe_challenge.sh → 39/39 PASS, 0 FAIL; UTF-8 detector flipped regression-present → fixed (literal: PASS [executor-marshal:utf8-detector:fixed] + KNOWN-ISSUE-RESOLVED: executor.appendJSONString now UTF-8 clean). Probe AppName="ü" (UTF-8 0xC3 0xBC) preserved end-to-end through MarshalJSON. |`

2026-05-20 | HXC-005: `cmd/performance_optimization_standalone/main.go` is a CONST-035 simulation bluff | Bug | Fixed (→ Fixed.md) | 318 | (this commit) | Decision: DELETE (obsolete). The standalone binary fabricated improvement percentages via `improvement := 5.0 + rand.Float64()*20.0`, slept `time.Sleep(500ms)` per fake phase, and reported success for work it never performed (canonical BLUFF-001 anti-pattern, CONST-035 / Article XI §11.9). Genuinely obsolete — fully superseded by `cmd/performance_optimization/` (snake_case post-CONST-052) which calls the REAL `internal/performance.PerformanceOptimizer` (real `runtime.ReadMemStats`, real GOMAXPROCS tuning, real before/after measurement) + CONST-046 i18n + unit tests. `git rm -r cmd/performance_optimization_standalone/`; stale refs purged from `docs/COMPREHENSIVE_AUDIT_REPORT.md`; gitignore extended for auto-generated perf reports (CONST-053). Reproduce-before-fix regression test `cmd/performance_optimization/bluff_regression_test.go`:

`TestHXC005_BluffStandaloneDirectoryDeleted` (obsolete path gone + real cmd survives) + `TestHXC005_RealOptimizerMeasuresActualMemory` (retained 32 MiB buffer → optimizer baseline `MemoryUsage` must track genuine `runtime.HeapAlloc`, not RNG). Evidence: `go build ./cmd/... exit 0; go test -count=1 -run TestHXC005 ./cmd/performance_optimization/ → both PASS` (literal: optimizer baseline `MemoryUsage=33812624` bytes, `runtime.HeapAlloc=33802008` bytes — both real measurements). |

2026-05-20 | HXV-001: LLMsVerifier 18 pre-existing tests/ failures (CLI-integration + verification/scoring) | Bug | Fixed (→ Fixed.md) | 323 | LLMsVerifier 59f542ba (github+gitlab) + meta pointer-bump

| Round-323 §11.4 / CONST-035. 18 failures classified: **(A) test-build drift** — 9 CLI tests (tests/automation_test.go) ran go run ../cmd/main.go which compiles ONLY main.go; i18n rounds 194/308/309/312/316/319 correctly placed tr()/trData() in cmd/i18n.go (same package main), so single-file go run broke with undefined: tr (go build ./cmd was always fine). Fix: re-keyed all 14 invocations to go run ../cmd (whole package — exercises the real CLI binary). **(A) test-assertion drift** — 9 tests/unit/model_verification_test.go cases asserted the OLD §11.4 PASS-bluff (verification.Verify() returning all-capabilities-true / all-scores-8.5); round-17 commit a6328629 correctly removed that fabrication → ErrVerificationNotWired. Fix: rewrote the unit suite to certify the HONEST contract (input validation; well-formed-but-unwired → loud ErrVerificationNotWired sentinel; verifier stateless + race-free). Real e2e verification stays in llmverifier/ integration suite. **(C) environment gate** — TestCommandFlagValidation/ TestOutputFormats list sub-tests dispatch real HTTP; tolerance only covered connection refused/dial tcp but a non-LLMsVerifier service answered 404. Fix: added serverUnavailable() recognising 404/5xx/no-host as a SKIP-OK: #HXV-001 env gate per CONST-035 (8 sub-tests now honest SKIP-OK). Evidence: before go test ./tests/... = 18 FAIL; after = ok digital.vasic.llmsverifier/tests (17.9s), ok .../tests/integration (3.1s), ok .../tests/unit (0.003s); go build ./... clean. No production code changed — round-17 production fix was already correct; only test re-keying. | 2026-05-20 | HXQ-001 (ex-ISSUE-008): helix_qa intermittent TestPerformance flake (host-load-sensitive) | Bug | Fixed (→ Fixed.md) | 325 | helix_qa 649e2dd (github+gitlab) + meta pointer-bump | Round-325 §11.4 / CONST-035. The three pkg/vision/ perf tests (TestPerformance_DHash64_Under5msPer1080pFrame, TestPerformance_PHash_Under25msPer1080pFrame, TestPerformance_SSIM_Under5msPer480pFrame) assert hard per-frame timing ceilings (5 ms / 25 ms / 5 ms) that flake under concurrent container/build CPU contention. **Decision: resolution path (b)** — env-var gating — chosen over path (a) (loosen tolerance). Rationale: loosening the timing tolerance would weaken the test's anti-bluff value (a genuine perf regression could then pass); path (b) preserves the strict assertions while making the flake deterministic. The three tests now gate on os.Getenv("HOST_LOAD_DEDICATED") — t.Skip("SKIP-OK: #HXQ-001 ...") honestly when unset (loaded/shared host), strict run when HOST_LOAD_DEDICATED=1 (quiescent dedicated host). NO timing tolerance loosened. docs/test-coverage.md §6.1 documents the env var. Evidence: go build ./pkg/vision/... exit 0, go vet clean; go test -count=1 -run TestPerformance ./pkg/vision/... (unset) → all 3 --- SKIP with SKIP-OK: #HXQ-001 marker; HOST_LOAD_DEDICATED=1 go test ... → all 3 --- PASS strict (DHash64 average 741ns, PHash average 88.969µs — well under the 5 ms / 25 ms ceilings). | 2026-05-20 | VEN-002 (ex-ISSUE-002): VisionEngine vasic-digital-github fork lineage divergent at SHA 93c830a | Bug | Fixed (→ Fixed.md) | 340 | VisionEngine merge 70c9e0c (4 remotes) + meta pointer-bump | Round-340 §11.4.41 / CONST-061 merge-

first. vasic-digital-github/master HEAD 93c830a→256cce1 carried 15 commits absent from HelixDevelopment local master (6e3888e); local carried 60 absent from vd. **Decision: merge-first** (operator-approved) — real 2-parent merge commit 70c9e0c (parents 6e3888e HelixDevelopment + 256cce1 vasic-digital), NO force-push, NO rebase, ALL commits from both lineages preserved. Integrated vd round-48 (aaf9bda RPC lifecycle sentinels) / round-52 (7c0455b real RPC server lifecycle) / round-57 (93c830a real ProbeHosts + planning) / round-47 (5496b2d) / round-40 (1169213 SSH Shutdown) / 76452da + governance cascades. **16-file conflict resolution:** (1) 6 challenge scripts — kept HEAD canonical VISIONENGINE_* env names, dropped fork-specific VISIONENGINE_VD_* prefix per CONST-051(B) decoupling; (2) go.mod/go.sum — kept HEAD newer testify-v1.11.1 transitive graph, go mod tidy reconciled clean; (3) pkg/analyzer/stub.go — took vd anti-bluff sentinel bodies: HEAD body had RE-INTRODUCED the fabricated ScreenAnalysis{Title:"Unknown Screen"}+err=nil PASS-bluff that the file's own unconflicted doc comments declare removed round-27 — per CONST-035/Article XI §11.9 the bluff must not survive; removed bluff-only i18n_defaults.go+i18n_callsites_test.go (sole consumer was the removed path; pkg/i18n package untouched); (4) pkg/remote/{remote,ssh,remote_test}.go — took HEAD: EnsureReady SSH-probe is a strict functional superset of vd's config-only EnsureReady, HEAD defines ErrBackendNotReachable+SSHConfig.BackendProbePort the merged body needs, HEAD SSHConfig is a field-superset so vd RPC code compiles unchanged; (5) pkg/remote/deployer_test.go — modify/delete conflict, kept vd's 1026-line real anti-bluff RPC test suite per CONST-061 union-merge (deployer.go+distributed.go auto-merged as pure vd additions); (6) CONSTITUTION.md/CLAUDE.md/AGENTS.md — took HEAD (current governance lineage: 52 §11.4.x anchors + CONST-001..061 + §11.4.67; vd-unique CONST-030 superseded by CONST-035, vd-unique CONST-068 is the ID-form of §11.4.67 HEAD carries by literal). Evidence: zero conflict markers (grep -rn '<<<<<<\\|=====\\|>>>>>>' --include='*.go' empty); go build ./... exit 0; go vet ./... clean; go test -count=1 ./... → 7 packages PASS (analyzer config graph i18n llmvision opencv remote); all 4 remotes fast-forwarded (6e3888e..70c9e0c helix-github/gitlab + vasic-digital-gitlab, 256cce1..70c9e0c vasic-digital-github — NO force on any). | 2026-05-20 | HXA-002 (ex-ISSUE-010): helix_agent debate/llmprovider sibling-submodule API drift | Bug | Fixed (→ Fixed.md) | 342 | helix_agent (round-342 HXA-002) + meta pointer-bump | Round-342 §11.4 / CONST-035. **Investigation finding (operator's explicit ask — moved vs deleted): GENUINELY DELETED, not moved.** git log on digital.vasic.debate (dependencies/HelixDevelopment/debate_orchestrator) shows the orchestrator was rebuilt from scratch (commit 196d0ea "initial DebateOrchestrator reconstruction (Phase 1)"); git log --follow orchestrator/api.go = single entry — the slim CreateDebate/GetStatistics API is the first and only version. Tree-wide grep of dependencies/ for KnowledgeRepository/GetRecommendations/

ConvertAPIRequest/GetDebateStatus/DefaultMinConsensus/
 MaxAgentsPerDebate/EnableAgentDiversity found ZERO surviving
 copies in any digital.vasic.* package or HelixSpecifier/
 HelixMemory. The richer learning/knowledge/recommendations
 tier was a pre-reconstruction artifact that no longer exists
 anywhere — not relocated. **Part 1 (mechanical import swap):**
 digital.vasic.llmprovider's LLMProvider interface now uses its own
 in-module digital.vasic.llmprovider/pkg/models; swapped
 digital.vasic.models → digital.vasic.llmprovider/pkg/models in 3
 files (provider_bridge.go production + mock_test.go +
 provider_bridge_leak_test.go unit tests). **Part 2 (slim-API
 rewrite, deleted-tier path per operator):** rewrote internal/
 services/debate_integration/integration_test.go + tests/
 integration/debate_full_flow_test.go down to the slim CreateDebate/
 GetStatistics/ConductDebate/CancelSession/Bank() surface — also
 fixed provider_bridge_test.go (NewProviderInvoker now takes
 (registry, name); GetKnowledgeRepository→Bank()) and
 service_integration_test.go
 (DebateMetrics.TotalResponses→ProviderCalls); converted all
 RegisterProvider scores from the old 0-10 scale to the
 reconstructed [0,1] scale (orchestrator now rejects score>1). Lost
 coverage documented honestly in the rewritten files' header
 comments: request-conversion / knowledge-repository /
 recommendations / status-by-id assertions dropped (those API
 surfaces no longer exist). **Bonus rename-drift fix:** helix_agent/
 go.mod replace digital.vasic.debate still pointed at PascalCase
 DebateOrchestrator after a parallel CONST-052 rename to
 debate_orchestrator — corrected (required precondition for
 verification). Evidence: go build ./internal/services/
 debate_integration/... exit 0; go test -count=1 ./internal/
 services/debate_integration/... → ok dev.helix.agent/internal/
 services/debate_integration 0.156s (PASS); rewritten
 TestDebateFullFlow_OrchestratorInit verified PASS in an isolated
 standalone package (the tests/integration package itself cannot
 compile due to a SEPARATE pre-existing helix_qa/pkg/autonomous
 ↔ VisionEngine remote API drift, entirely unrelated to HXA-002 —
 helix_qa committed code at 7fa674a). The standalone verification
 caught and fixed one wrong assertion in the original test
 (DefaultTimeout is 30s, not 5m). gofmt clean on all 8 changed files. |
 2026-05-20 | VEN-002 (ex-ISSUE-002): VisionEngine vasic-

 meta pointer-bump | Round-344 §11.4 / CONST-035. Drift resolved
 by consuming the round-340 VEN-002 merged superset remote API
 — drift was MECHANICAL (three changed signatures, no
 removed type, no renamed symbol). **Per-symbol classification:**

(1) ProbeHosts — (ctx, hosts []string, user string) []HardwareInfo → (ctx, hosts []SSHConfig) ([]HardwareInfo, error). Fix: pipeline.go builds a []visionremote.SSHConfig from VisionHosts + config-injected SSH key / known_hosts / port; the joined per-host probe error is surfaced as a warning (partial-success is normal).

(2) SelectStrongestModel — (infos []HardwareInfo)

*ModelRecommendation → (infos []HardwareInfo, models []ModelSpec) (*ModelRecommendation, error). Fix: a single-entry visionremote.ModelSpec catalogue is built from LlamaCppRPCModelPath + config capacity floors; error handled with single-host fallback.

(3) PlanDistribution — (infos []HardwareInfo, path string, serverPort, rpcBasePort int) *DistributionConfig → (infos []HardwareInfo, models []ModelSpec) (*DistributionConfig, error).

Fix: the GGUF model path and server port are no longer call arguments — they are set on the returned *DistributionConfig after the planner's best-fit bin-pack; error handled with single-host fallback. Added five config-injected pipeline fields (VisionSSHKeyPath, VisionSSHKnownHostsPath, VisionSSHPort, VisionRPCMinGPUMemMB, VisionRPCMinRAMMB) per CONST-045 / CONST-046 — no hardcoded secrets or model metadata. VisionEngine submodule pointer was already at the round-340 merged HEAD 70c9e0c (no bump needed). Evidence:

```
cd helix_qa && go build ./pkg/autonomous/... exit 0; go test
-count=1 ./pkg/autonomous/... → ok digital.vasic.helixqa/pkg/
autonomous 14.270s (PASS); cd helix_agent && go build ./tests/
integration/... exit 0 — the original HXQ-002 symptom is
resolved. |
```

2026-05-20 | HXV-002: LLMsVerifier verification/ package 10 pre-existing test failures | Bug | Fixed (→ Fixed.md) | 348 |

LLMsVerifier (round-348 HXV-002) + meta pointer-bump |

Round-348 §11.4 / CONST-035. All 10 failures classified **(A) test-assertion drift** — every failing test asserted pre-honesty fabricated behaviour that round-17 commit a6328629 correctly removed; **no production code changed. 8 in**

verification_test.go — TestVerifier_Verify_Success / _ResultScores / _LatencyMetrics / _CodeLanguageSupport / _CodeCapabilities / _ModelStatusFlags / _ContextCancellation / _MultipleRequests each asserted require.NoError + fabricated all-capabilities-true / all-scores-8.5 / fabricated latency+status results; Verify() now correctly returns ErrVerificationNotWired (the honest round-17 contract — verification dispatch deliberately un-wired to remove a CONST-036/037 single-source-of-truth PASS-bluff). Re-keyed each to certify the honest contract: require.Error + errors.Is(err, ErrVerificationNotWired) + nil result; _Success renamed TestVerifier_Verify_NotWiredContract for accuracy. **2 in**

code_verification_test.go — TestCodeVisibility_Error asserted require.NoError on an HTTP 503 (the OLD bluff that swallowed API failures); production correctly propagates the error so callers distinguish API failure from negative verification — re-keyed to require.Error + 503 substring, response still carries Verified=false+Error. VerifyModelCodeVisibility_ServerError asserted Status=="verified"+score≥0.7 on a server returning

HTTP 500 for every sample (the “relaxed verification” bluff); zero successful responses → production correctly returns Status=="failed" — re-keyed to assert failed + non-empty ErrorMessage. Evidence: before go test ./verification/... = 10 FAIL; after = ok digital.vasic.llmsverifier/verification 1.635s, 0 failures; go build ./... clean. Mirrors HXV-001 round-323 classification approach — production code (round-17 ErrVerificationNotWired, code_verification.go error-propagation + zero-response→failed) was already honest; only stale test assertions needed re-keying. |

2026-05-20 | HXV-003: LLMsVerifier

ProviderAdapterForBenchmark.Complete is a CONST-050(A) production mock-bluff | Bug | Fixed (→ Fixed.md) | 396 | LLMsVerifier (round-396 HXV-003) + meta pointer-bump | Round-396 §11.4 / CONST-050(A) / CONST-035 / BLUFF-001.

Decision: WIRE, not delete. Investigation confirmed

ProviderAdapterForBenchmark IS live code —

BenchmarkSystem.Initialize wires it as the runner’s LLMPProvider (two call sites in benchmark_test.go), so honest deletion was not applicable. The bug: Complete(ctx, prompt, systemPrompt) body was // Mock implementation - actual would call real provider + return "Response", 50, nil — fabricated a hardcoded completion for an LLM call it never made (canonical BLUFF-001). **Fix:** the adapter’s provider field was an untyped interface{} it never used; retyped it to the real benchmark.LLMPProvider interface (Complete + GetName, the same contract HTTPBenchmarkProvider satisfies).

NewProviderAdapterForBenchmark now type-asserts the passed value to LLMPProvider and stores it; Complete dispatches directly to a.provider.Complete(ctx, prompt, systemPrompt), returning the underlying provider’s genuine response text + real token count + real error verbatim. When no real provider is wired, Complete returns the new honest sentinel ErrProviderAdapterNotWired — it NEVER fabricates a result (mirrors the round-28

ErrBenchmarkProviderNotConfigured posture). The real dispatch path is HTTPBenchmarkProvider (OpenAI-compatible HTTP LLMPProvider, already in the package). **Reproduce-before-fix tests**

(benchmark_coverage_test.go): the pre-existing

TestProviderAdapterForBenchmark_Complete relied on the bluff (nil provider → NoError + non-empty resp) — replaced with two honest tests: _Complete_NotWired asserts ErrProviderAdapterNotWired + empty resp + zero tokens (no fabrication), and

_Complete_RealDispatch constructs an httptest.NewServer OpenAI shim + HTTPBenchmarkProvider, asserts the adapter ACTUALLY hits the server (hit-counter == 1) and returns the real server payload ("4 is the real answer", server-reported total_tokens 19) —

explicitly NotEqual("Response") / NotEqual(50). Evidence: go build ./... exit 0; go test -count=1 ./internal/benchmark/... → ok llmsverifier/internal/benchmark 12.334s (PASS); the 3

TestProviderAdapterForBenchmark* tests all --- PASS; anti-bluff smoke grep -rn "Mock implementation\|simulated\|for now" internal/benchmark/*.go (prod only) = clean. |

2026-05-20 | HXC-006: HelixCode Speed Programme — 3-5× faster than competitor AI CLI agents (6-phase / 31-task) | Feature | Implemented (→ Fixed.md) | 400 | P5-T04 (this commit) + 30 prior task commits | Round-400 / CONST-048 / CONST-035. Operator mandate 2026-05-20: make HelixCode + owned-submodule code 3-5× faster than competitor AI CLI agents without breaking any feature or weakening anti-bluff posture. **All 6 phases / 31 tasks landed** — P0-T01..04 (baseline harness: pprof + benchmarks + competitor wall-clock + scenario runner), P1-T01..07 (LLM & startup wins), P2-T01..07 (context-build speed), P3-T01..05 (interactive & agent-loop levers), P4-T01..04 (profile-gated tuning), P5-T01..04 (dev-experience + submodule cascade + this close-out). **CONST-048 coverage ledger** committed at docs/research/speed/05-coverage-ledger.md: **29 PASS + 2 honestly-bounded PARTIAL + 0 DEFERRED**. PARTIALs reported truthfully — P5-T01 (98315a14) build/test parallelism tuning is landed and correct but the suite-wall-time before/after delta was not captured as a pasted benchmark; P5-T02 (4ee771d7) is a partial single-provider internal/llm split (Cerebras extracted to internal/llm/providers/cerebras/) — a full 18-provider extraction is genuinely infeasible without an import cycle (factory.go in package llm constructs every provider). **Headline measured wins** (each carries pasted in-session evidence per CONST-035, transcribed in the ledger): P1-T01 HTTP/2 transport ~2×, P1-T02 lazy Ollama discovery 67µs→2.7ns, P1-T03 lazy CLI startup ~8.85×, P1-T06 cache pre-warm ~7.6×, P2-T02 regexp hoist ~7.4×, P2-T03 repo-map cache ~10.6× warm, P2-T04 parallel repo-map ~1.67×, P2-T05 parallel search ~4.39×, P2-T06 incremental tree-sitter ~21×, P3-T01 small-model routing ~5.87×, P3-T02 diff edits 94-99% token cut, P3-T03 fast-apply ~516×, P3-T04 tool parallelism ~5.99×, P4-T01 PGO -46% CPU-bound. **Release-gate sweep (P5-T04):** anti-bluff smoke `grep -rn "simulated\|for now\|TODO implement\|placeholder" helix_code/internal helix_code/cmd (prod) = clean; scripts/audit-const046-hardcoded-content.sh` ran exit 0 (speed work added no user-facing strings, no new hardcoded content); `scripts/verify-governance-cascade.sh` = 2 pre-existing failures = the already-tracked HXC-008 drift (verifier stale Models path + helix_qa/CONSTITUTION.md missing CONST-047..057), NOT speed-programme regressions. Two pre-existing defects surfaced during the programme filed honestly as **HXC-011** (helix_qa runner hollow sub-µs PASSED rows on desktop platform — §11.4 PASS-bluff) + **HXC-012** (internal/llm/load_balancer.go stat-collector data race under -race). No speed task introduced a regression, a new bluff pattern, or new hardcoded content. |

Last regenerated: 2026-05-20 (round 400 — HXC-006 closure: HelixCode Speed Programme — all 6 phases / 31 tasks landed; CONST-048 coverage ledger docs/research/speed/05-coverage-ledger.md = 29 PASS + 2 PARTIAL + 0 DEFERRED; release-gate sweep clean of speed-attributable failures; HXC-011 + HXC-012 filed for two pre-existing defects surfaced during the programme).

*Previous round 396 — HXV-003 closure. Earlier closures (P0-P5 phases) tracked via docs/improvements/PROGRESS.md + docs/improvements/*evidence*.md.*
