

HelixCode — Open Issues Tracker

Per Constitution §11.4.15 (Item-status tracking) + §11.4.16 (Item-type tracking) + §11.4.19 (Fixed-document column-alignment) + CONST-057 (Type-aware closure vocabulary) + CONST-058 (Reopened-source attribution).

Authoritative resumption ledger: docs/CONTINUATION.md (CONST-044). This file complements it with item-level granularity for currently-open work.

Status vocabulary (closed set): Queued | In progress | Ready for testing | In testing | Reopened | Fixed/Implemented/Completed (→ Fixed.md)

Type vocabulary (closed set): Bug | Feature | Task

ISSUE-001 — VisionEngine helix-gitlab remote repo missing (404)

Status: Queued — BLOCKED on operator (gitlab repo creation)

Type: Task **Discovered:** 2026-05-19 (round 98 — Planning + VisionEngine i18n migration) **Discovered-By:** AI subagent during 4-remote push attempt **Evidence:** Push attempt against git@gitlab.com:HelixDevelopment/visionengine.git returned 404 not found. CONST-043 honoured (no force-push attempted).

Resolution path: Operator creates the gitlab.com repository OR removes the helix-gitlab named remote from VisionEngine's local config. Pre-existing infra gap, not introduced by round-98 work.

ISSUE-002 — VisionEngine vasic-digital-github fork lineage divergent at SHA 93c830a

Status: Queued — BLOCKED on operator (CONST-061 merge-first investigation) **Type:** Bug **Discovered:** 2026-05-19 (round 98)

Discovered-By: AI subagent during 4-remote push attempt

Evidence: vasic-digital-github HEAD 93c830a carries

round-48/52/57 commits absent from HelixDevelopment local main. Non-FF push rejected. NO force-push attempted (CONST-043). **Resolution path:** Operator-led CONST-061 merge-first pipeline — fetch divergent commits, audit conflict surface, integrate or document divergence as intentional fork, then either FF-push or designate one lineage as canonical.

ISSUE-003 — HelixLLM internal/agents/tools/analysis_test.go hardcoded absolute path

Status: Fixed (→ Fixed.md) **Type:** Bug **Discovered:** 2026-05-19 (round 95 — HelixLLM migration; surfaced as pre-existing failure) **Discovered-By:** AI subagent during HelixLLM standalone test run **Closed-By:** Round 105 (commit a5e56d4 in HelixLLM; meta pointer fedd152) **Attribution correction:** Originally documented as helix_agent; actual location is HelixLLM submodule (dependencies/HelixDevelopment/HelixLLM/internal/agents/tools/). Commit SHAs 0a84310 resolved there. **Resolution:** Replaced hardcoded path with t.TempDir() + 2 synthesised fixture files. Bonus: same bug-pattern discovered in git_test.go (constant helixLLMRoot + 7 tests) — refactored gitSandbox() signature. 6 tests now PASS on any host. Mutation verified.

ISSUE-004 — HelixLLM internal/gateway/middleware TOON WriteT00N returns 500

Status: Fixed (→ Fixed.md) **Type:** Bug **Discovered:** 2026-05-19 (round 95) **Discovered-By:** AI subagent **Closed-By:** Round 105 (commit a5e56d4) **Attribution correction:** Originally documented as helix_agent; actual location is HelixLLM submodule. Commit 6f11c56 resolved there. **Resolution:** Root cause was vasic-digital/TOON's round-27 anti-bluff change (Marshal returns ErrT00NEncodingNotImplemented unconditionally) combined with WriteT00N treating ANY Marshal error as 500. Fix: fall back to json.Marshal while preserving application/toon Content-Type (matches ContentNegotiation middleware). 500 still returned for genuinely unmarshallable values (channels). 19 middleware tests now PASS. Mutation verified.

ISSUE-005 — CONST-052 rename programme: meta-repo directories still PascalCase

Status: Queued **Type:** Task **Discovered:** 2026-05-15 (CONST-052 cascade landed) **Discovered-By:** Constitution **Evidence:** Meta-repo directories like `helix_code/`, `challenges/`, `helix_qa/`, `helix_agent/` still PascalCase despite CONST-052 mandating `snake_case`. Renames deferred because they break path-encoded references throughout governance docs, CI scripts, and tracker URLs. **Resolution path:** Phased migration per CONST-052 §11.4.29: comprehensive brainstorming → phase-divided plan → fine-grained tasks → every change covered by every applicable test type. Round 88 made partial progress (3 submodules with drift fixed) but root directories remain.

ISSUE-006 — Round-74 residual LOGIC-class FAILs (HelixMemory ✓ + Planning ✓ + helix_agent inner pending)

Status: In progress (2/3 components closed) **Type:** Bug **Discovered:** 2026-05-19 (round 74 — `release-gate-test.sh` creation; classified by round 89) **Discovered-By:** AI release-gate sweep **Closure progress:** - ✓ HelixMemory: closed round 106 (commit 69016df — single-line `go.mod` fix; 6 FAIL → 0 FAIL) - ✓ vasic-digital/Planning: round 107 NO-OP — 275 PASS / 0 FAIL / 20 SKIP-OK; likely incidentally fixed by round 98 i18n migration - ○ `helix_agent` inner: PENDING (not yet investigated; may have already been fixed elsewhere — round 105 found ISSUE-003/004 were actually in HelixLLM) **Evidence:** Round 74 surfaced 26 FAILs across submodules; rounds 82-87 closed 19; this Issue tracked the residual 7 across 3 submodules. 2 closed; 1 remaining. **Resolution path:** Future round investigates `helix_agent` inner test suite for LOGIC-class residuals; may be no-op if already resolved.

ISSUE-007 — CONST-046 migration backlog (57,329 violations baselined; shrinking)

Status: In progress **Type:** Feature **Discovered:** 2026-05-19 (round 92 — audit script) **Discovered-By:** AI subagent ground-truth scan **Evidence:** Round-92 scan reported 57,345 violations

across 21,937 files. Round 99b baseline collapsed to 54,803 unique (path, literal_hash) keys. Phase 4 (rounds 100+) systematically migrating top-concentration files: round 100 (evaluators.go), 101 (challenge_recorded_ai_testgen.go), 102 (challenge_desktop.go) — see CONTINUATION.md close-outs. **Resolution path:** Continued Phase 4 cadence; audit-gate --fail-on-new already enforced; each migration round MUST re-run --update-baseline so snapshot shrinks toward zero.

ISSUE-008 — helix_qa intermittent TestPerformance flake (host-load-sensitive)

Status: Queued — BLOCKED on operator (host topology decision)
Type: Bug **Discovered:** 2026-05-19 (round 82) **Discovered-By:** AI subagent **Evidence:** helix_qa TestPerformance fails intermittently under high host load (concurrent containers + builds). Not a code bug per se; a sensitivity issue. **Resolution path:** Either (a) loosen timing tolerance with explicit comment + reference to host topology, or (b) gate the test behind a HOST_LOAD_DEDICATED=1 env var to run only on quiescent hosts. Operator decision needed.

Last regenerated: 2026-05-19. To update Issues_Summary.md mechanically, run scripts/generate_issues_summary.sh (TODO: create — currently this Issues.md is the source of truth and Summary is hand-maintained).
